subject of concentrated research for over 25 years particularly because of its key role in silicon integrated circuits However  
only a few comprehensive treatises on this field have been published in recent years This book focuses on the materials  
science and technology aspects of the system Its aim is to give a comprehensive overview of the topic including an extensive  
list of references giving easy access to the literature After an introductory chapter which reviews the Si SiO<sub>2</sub> system from  
the perspective of other semiconductor insulator combinations of technical interest the technology of oxide preparation is  
discussed Fundamental questions regarding the structure and chemistry of the interfacial region are then addressed Two  
chapters are concerned with system properties one deals with the physico chemical electrical and device related  
characteristics and the way these are affected by the technology of oxide preparation a second chapter focuses on point  
defects and charge trapping The book concludes with a broad review of the techniques available for electrical  
characterization of the system including the physical background    English Mechanic and Mirror of Science ,1877

energy raw materials metals and manpower in a dynamically developing society calls for the development of materials of  
unconventional properties and for high endurance and reliability in operation The responses of various materials to  
unidirectional or repeated mechanical stress has already been examined estimated classified and quantified for more than  
two centuries In spite of this it is not possible at present to generalize the sophisticated processes occurring in the  
microplasticity and failure of materials However it is possible to offer a more or less compact physico metallurgical  
interpretation of such limiting states as plastic flow and material failure The better utilization of latent properties requires  
thorough knowledge of the physical essence of the critical processes occurring in materials under mechanical loading This  
book makes use of the accumulated knowledge of elementary processes in microplasticity and failure complemented by the  
latest knowledge from the world literature and by the results the author and his collaborators have obtained No publication
