## **Solidification And Cast Structure:**

*Solidification and Cast Structure* I. Minkoff, 1986-08-11 This practical guide presents a comprehensive account of solidification processes in metals and alloys and describes the manner in which cast structure arises. Reviews the principle features of solidification theory in an accessible and easily understood manner. Relates the solidification and cast structure process to different industrial processes such as conventional casting, continuous casting, welding, and rapid solidification. Provides concise descriptions of structure formation in cast steel, cast iron, and aluminum. Includes treatment of cast ceramics, glass, metal, nonmetal structures, rapid solidification, welding, and continuous casting processes. *Solidification and cast structure* I. Minkoff, 1986

**Solidification, Second Edition** Doru Michael Stefanescu, 2008-12-03 Stefanescu here attempts to describe solidification theory through the complex mathematical apparatus required for a fundamental treatment of the problem. The mathematics is however restricted to the elements essential to attain a working knowledge in the field. This is in line with the main goal of the book which is to educate the reader in the fast moving area of computational modeling of solidification of castings. A special effort has been made to introduce the reader to the latest developments in solidification theory including in this second edition a new chapter on semi solid casting.

Solidification Processes and Microstructures Michel

Rappaz, Christoph Beckermann, Rohit Trivedi, 2004-03 Papers from a March 2004 symposium describe recent work in solidification processes and microstructures in the areas of mushy zone dynamics, rapid solidification and phase field modeling. Some specific topics include kinetics of dendritic mushy zones, anisotropy effects in lamellar eutectic growth, network modeling of liquid metal transport in solidifying aluminum alloys and the topology of coarsened microstructures. Other topics include diffuse solid liquid interfaces and solute trapping, phase selection transitions during undercooled melt solidification, dendritic growth in confined spaces, the influence of foreign particles in the formation of polycrystalline solidification patterns and a cellular automaton for growth of solutal dendrites.
