Solidification and Crystallization Processing in Metals and Alloys Hasse Fredriksson KTH Royal Institute of Technology Stockholm Sweden Ulla Åkerlind University of Stockholm Sweden Solidification or crystallization occurs when atoms are transformed from the disordered liquid state to the more ordered solid state and is fundamental to metals processing Conceived as a companion volume to the earlier works Materials Processing during Casting 2006 and Physics of Functional Materials 2008 this book analyzes solidification and crystallization processes in depth Starting from the thermodynamic point of view it gives a complete description taking into account kinetics and mass transfer down to the final structure Importantly the book shows the relationship between the theory and the experimental results Topics covered include Fundamentals of thermodynamics Properties of interfaces Nucleation Crystal growth in vapours liquids and melts Heat transport during solidification processes Solidification structures faceted dendritic eutectic and peritectic Metallic glasses and amorphous alloy melts Solidification and Crystallization Processing in Metals and Alloys features many solved examples in the text and exercises with answers for students Intended for Masters and PhD students as well as researchers in Materials Science Engineering Chemistry and Metallurgy it is also a valuable resource for engineers in industry

Solidification and Crystallization Dieter M. Herlach, 2006-03-06 Current interest in research of solidification of melts is focussed to understand crystal nucleation and crystal growth They determine the solidified product with its physical properties A detailed description of these processes lead to the development and validation of physical models which may form the basis of quantitative modelling of solidification routes in e g casting and foundry processes in order to develop a predictive capability in the design of materials during solidification This book based on a symposium held at EUROMAT 2003 aims to gives an overview on current developments in the research of solidification and crystallisation of liquids The materials of interest range from metals and their alloys over semiconductors and isolators to organic substances *Aluminium alloys of high quality* Instytut Inżynierii Materiałowej i Technik Bezwiórowych, 1996
