Topics In Soliton Theory And Exactly Solvable Nonlinear Equations: Proceedings Of The Conference On Nonlinear Evolution Equations, Solitons And The Inverse Scattering Transform

Mark J Ablowitz, Benno Fuchssteiner, M Kruskal, 1987-06-01 The focus of this volume is to show how the various successful models of nuclear structure complement one another and can be realised as approximations

appropriate in different situations to an underlying non relativistic many nucleon theory of nuclei In common with the previous volume on Foundational Models it starts with a broad survey of the relevant nuclear structure data and proceeds with two dominant themes The first is to review the many body theories and successful phenomenological models with collective and nucleon degrees of freedom The second is to show how these models relate to the underlying many nucleon shell model in its various coupling schemes

Nonlinear Evolution Equations Solvable by the Spectral Transform F. Calogero, Francesco Calogero, 1978 The volume contains the text of the invited lectures presented at the International Symposium on Nonlinear Evolution Equations Solvable by the Inverse Spectral Transform that took place at the Accademia dei Lincei in Rome from June 15 through June 18 1977 It introduces an important mathematical technique based on the spectral transform and relevant to the solution of nonlinear evolution equations These texts will be of particular value to theoretical physicists in plasma nonlinear optics hydrodynamics solid state and elementary particles applied mathematicians interested in nonlinear evolution equations and pure mathematicians interested in algebraic and differential geometry

Solitons and the Inverse Scattering Transform Mark J. Ablowitz, Harvey Segur, 2006-05-15 A study by two of the major contributors to the theory of the inverse scattering transform and its application to problems of nonlinear dispersive waves that arise in fluid dynamics plasma physics nonlinear optics particle physics crystal lattice theory nonlinear circuit theory and other areas A soliton is a localised pulse like nonlinear wave that possesses remarkable stability properties Typically problems that admit soliton solutions are in the form of evolution equations that describe how some variable or set of variables evolve in time from a given state The equations may take a variety of forms for example PDEs differential difference equations partial difference equations and integrodifferential equations as well as coupled ODEs of finite order What is surprising is that although these problems are nonlinear the general solution that evolves from almost arbitrary initial data may be obtained without approximation

Proceedings of the NSF Research Workshop on Contact Transformations Held in Nashville Tennessee 1974 **Nonlinear Evolution Equations and Soliton Solutions** Yucui Guo,2016 This book studies the methods for solving non linear partial differential equations that have physical meaning and soliton theory with applications Specific descriptions on the formation mechanism of soliton solutions of non linear partial differential equations are given and some methods for solving this kind of solution such as the Inverse Scattering Transform method Backlund Transformation method Similarity Reduction method and several kinds of function transformation methods are introduced Integrability of non linear partial differential equations is also discussed This book is suitable for graduate students whose research fields are in applied mathematics applied physics and non linear science related directions as a textbook or a research reference book This book is also useful for non linear science researchers and teachers as a reference book The characteristics of this book are 1 The author provides clear concepts rigorous derivation thorough reasoning and rigorous logic in the book Since the research boom of non linear partial differential equations was rising in the 1960s the research on non linear partial differential equations and soliton theory has only been several decades which can be described as a very young discipline compared to the other branches in mathematics Although there are a few related books they are mostly in highly specialised interdisciplinary areas There is no book which is suitable for cross disciplines and for people with college level mathematics and college physics background This book fills that gap 2 The book is easy to be understood by readers since it provides step by step approaches All results in the book have been deduced and collated by the author to make sure that they are correct and perfect 3 The derivation from the physical

models to mathematical models is emphasised in the book In mathematical physics we cannot just simply consider the mathematical problems without a physical image which often plays the key role for understanding the mathematical problems 4 Mathematical transformation methods are provided The basic idea of various methods for solving non linear partial differential equations is to simplify the complex equations into simple ones through some transformations or decompositions However we cannot find any patterns for using such transformations or decompositions and certain conjectures and assumptions have to be used However the skill and the logic of using the transformations and decompositions are very important to researchers in this field **Solitons** Boling Guo,Xiao-Feng Pang,Yu-Feng Wang,Nan Liu,2018-03-19 This book provides an up to date overview of mathematical theories and research results on solitons presenting related mathematical methods and applications as well as numerical experiments Different types of soliton equations are covered along with their dynamical behaviors and applications from physics making the book an essential reference for researchers and graduate students in applied mathematics and physics Contents Introduction Inverse scattering transform Asymptotic behavior to initial value problems for some integrable evolution nonlinear equations Interaction of solitons and its asymptotic properties Hirota method B cklund transformations and the infinitely many conservation laws Multi dimensional solitons and their stability Numerical computation methods for some nonlinear evolution equations The geometric theory of solitons Global existence and blow up for the nonlinear evolution equations The soliton movements of elementary particles in nonlinear quantum field The theory of soliton movement of superconductive features The soliton movements in condensed state systemsontents **Solitons** Muthusamy Lakshmanan,2012-12-06 A good deal of the material presented in this book has been prepared by top experts in the field lecturing in January 1987 at the Winter School on Solitons in Tiruchirapalli India The lectures begin at an elementary level but go on to include even the most recent developments in the field The book makes a handy introduction to the various facets of the soliton concept and will be useful both to newcomers to the field and to researchers who are interested in developments in new branches of physics and mathematics
