Spontaneous Cognitive Processes In Handicapped Children:

Spontaneous Cognitive Processes in Handicapped Children Miriam Cherkes-Julkowski, Nancy Gertner, 2012-12-06 The thinking that began this book arose out of some dissatisfaction with the relatively simplified unidimensional model of development which seems to have come to dominate the fields that address the needs of atypically developing children. It seemed impossible to us that developmental differences could explain the range of learning and coping styles we have seen and read about in children identified as mentally retarded, slow learning, learning disabled, nonhandicapped, and gifted. If a typical model of development did not account for what children with handicaps to learning could do when they would do it and how they would accomplish it, such a model was not likely to imply anything important about how to intervene with and help them. Unfortunately when we first began to examine this problem turning away from a developmental model for interpreting atypical behavior meant turning toward a behaviorist one. This was not very satisfying either. Again the assumptions were bothersome. We were expected to accept that all children this time at all ages as well as with all kinds of diagnoses learned in essentially the same way with perhaps some variation in rate, reactivity, reinforcement preferences and according to more liberal applications expectancy. In our search for a more satisfying view of the atypical learner we were lucky to be lost at the moment when cognitive psychology and systems theory were being found. *Child Language Development* Sandra Bochner, Jane Jones, 2008-04-30 This publication is concerned with the early stages of language acquisition and is designed for use by early childhood teachers, nursery nurses, special education teachers, and others working with children experiencing difficulties in learning to talk. Procedures are described that can be used to assess a child's current skills and plan activities to increase communicative competence. The programme described is based on a developmental sequence that moves the early skills of joint attention, turn taking, and appropriate play to the more complex skills of asking and answering questions. Other issues discussed include sound development and intelligibility, the use of augmentative and alternative communication as stepping stones to speech, working with children and with families. The second edition has an expanded focus on the place of communicative intentions in early language development.

Functional Communication Les Sternberg, 2012-12-06 DEVELOPMENT OF NON LINGUISTIC COMMUNICATION SKILLS which presents the results of research accomplished through the joint sponsorship of the Sonoma Development Center SDS and the College of Education of Florida Atlantic University FAU examines the development of prelanguage and nonlinguistic skills in individuals with various types and degrees of developmental disabilities. Utilizing the dichotomies that may exist between communication and language the book explores communication skills rather than formal language systems acquisition. American Journal of Mental Retardation, 1996-07 **The South African Journal of Communication Disorders**, 1994 Learning Disabilities, 1993 Early Intervention in Transition Kofi Marfo, 1991-12-30 The growing prominence of ecological and social systems perspectives in the child development and family studies fields is having a

significant impact on the conceptualization and delivery of early intervention services. The exclusive focus on the handicapped or developmentally delayed child is gradually giving way to a much broader focus on the family as a system. The parent child relationship is increasingly becoming a major intervention target. At the same time the need to fine tune intervention programs to respond to the unique needs of different etiological groups is being emphasized. This book brings together the conceptual and empirical work of a number of scholars whose current research is at the leading edge of these shifts. The volume consists of an introductory overview of transitions occurring in the early intervention field a six chapter section dealing with current themes and conceptualizations of early intervention and a four chapter section focusing on international perspectives that describes influences on and noticeable trends in early intervention programming and research in several countries. This book by its nature has an international appeal but perhaps more significantly it affords American researchers a unique opportunity to learn about the field of intervention as practiced in other lands. The volume is intended for researchers graduate and senior undergraduate students program developers and administrators in the early intervention field and other human service professionals.

The Onset of Literacy Paul Bertelson, 1987

The Onset of Literacy addresses one of the main questions in the field of reading research why the acquisition of skills in reading and writing appears to be so much more difficult than the earlier acquisition of speech communication. As well as posing a major theoretical puzzle the question has important implications for both instructional practices and ways of dealing with dyslexic children. Research on the reading process has made important progress in recent years thanks to conceptual and methodological advances in cognitive psychology psycholinguistics and neuropsychology which have made it possible to deal with complex issues that in the past seemed to defy rational analysis. The Onset of Literacy presents a selective sample of work by major contemporary specialists who focus on current information processing approaches to the reading process and their interface with research on the development of reading and related skills. An introduction by the editor summarizes and places the various contributions within current analyses of reading inspired by the information processing approach. The chapters and their authors are:

- The Ability to Manipulate Speech Sounds Depends on Knowing Alphabetic Writing Charles Read, Zhang Yun Fei, Nie Hong Yin and Ding BaoQing
- Literacy Training and Speech Segmentation Jos Morais, Paul Bertelson, Luz Cary and Jesus Alegria
- Phonological Awareness The Role of Reading Experience Virginia A Mann
- Word Recognition in Early Reading A Review of the Direct and Indirect Access Hypotheses Roderick W Barron
- The Similarities Between Normal Readers and Developmental and Acquired Dyslexics Peter Bryant and Lawrence Impey
- Language Mechanisms and Reading Disorder A Modular Approach Donald Shankweiler and Stephen Crain
- Paul Bertelson is Professor of Experimental Psychology and Director of the Laboratory of Experimental Psychology at the Universit Libre de Bruxelles.

The Onset of Literacy is in a series that is derived from special issues of Cognition International Journal of Cognitive Science edited by Jacques Mehler A Bradford Book
