Methods and applications in psychopathology: New methods and trends for the understanding of neuropsychiatric disorders Chong Chen, Gabriele Nibbio, Yuka Kotozaki, 2023-08-24 *The Biomarkers, Mechanism, and Therapeutic Strategies of Cancer Immunotherapy Resistance* Mou Peng, Xin Jin, Yunliang Gao, Xiaoxin Ren, 2025-07-30 Over the decades cancer immunotherapy has been a burgeoning science in medicine and an established pillar of therapeutic options for diverse cancer types. Leading the way to success is mainly the discovery and development of immune checkpoint inhibitors (ICIs) and chimeric antigen receptor (CAR) T cell based therapies. Under immunotherapy, a portion of cancer patients are able to achieve a significant and durable remission with a longer survival time, particularly in those with lung cancer, melanoma, genitourinary cancer, etc. However, striking disparities still exist in the effectiveness of anticancer immunotherapy and cause a great challenge to select appropriate candidates. A large part of cancer patients presents limited or no response to immunotherapy, mainly attributable to immunotherapy resistance. Despite of great strides already made, the exact mechanism underlying immunotherapy resistance is still enigmatic. Immunotherapy resistance is extremely complex and involves voluminous aspects such as tumor intrinsic factors, aberrant expression of tumor antigens, alterations of signaling pathways, etc. tumor extrinsic factors, local tumor microenvironment, etc. and host related factors (gender, age, etc.). More efforts should be made to characterize the underlying mechanism and uncover robust targets for a better response rate.
