Techno-Fix Michael Huesemann, Joyce Huesemann, 2011-10-04 Nanotechnology Genetic engineering Miracle Drugs We are promised that new technological developments will magically save us from the dire consequences of the 300 year fossil fueled binge known as modern industrial civilization without demanding any fundamental changes in our behavior There is a pervasive belief that technological innovation will enable us to continue our current lifestyle indefinitely and will prevent social economic and environmental collapse Techno Fix shows that negative unintended consequences of technology are inherently predictable and unavoidable techno optimism is completely unjustified and modern technology in the presence of continued economic growth does not promote sustainability but hastens collapse The authors demonstrate that most technological solutions to social and technology created problems are ineffective They explore the reasons for the uncritical acceptance of new technologies show who really controls the direction of technological change and then advocate extensive reform This comprehensive expos is a powerful argument for why we can and should put the genie back in the bottle An insightful and powerful critique it is required reading for anyone who is concerned about blind techno optimism and believes that the time has come to make science and technology more socially and environmentally responsible For more information please visit technofix.org

Technology and Environment National Academy of Engineering, 1989-02-01 Technology and Environment is one of a series of publications designed to bring national attention to issues of the greatest importance in engineering and technology during the 25th year of the National Academy of Engineering A paradox of technology is that it can be both the source of environmental damage and our best hope for repairing such damage today and avoiding it in the future Technology and Environment addresses this paradox and the blind spot it creates in our understanding of environmental crises The book considers the proximate causes of environmental damage machines factories cities and so on in a larger societal context from which the will to devise and implement solutions must arise It helps explain the depth and difficulty of such issues as global warming and hazardous wastes but also demonstrates the potential of technological innovation to have a constructive impact on the planet With a range of data and examples the authors cover such topics as the industrial metabolism of production and consumption the environmental consequences of the information era and design of environmentally compatible technologies

Technology and Sustainability Peter Denton, 2014-11-14 Provocative passionate and populist RMB Manifestos are short and concise non fiction books of literary critical and cultural studies The developed world is increasingly obsessed with two things electronic gadgets and our changing climate We stand in open mouthed awe of our technological achievements while dejectedly shrugging our shoulders at the state of the planet on which we live Our choice is clear we need to reimagine the way we engage with the technology we create if we hope to make the world a better place Peter Denton's first RMB manifesto Gift Ecology Reimagining a Sustainable World focused on interpersonal relationships as the foundation for a vibrant and ecologically sustainable society In his second thought

provoking book in the series the author challenges readers to think of our devices not merely as better rocks and sharper spears but as profound extensions of our hearts and minds that we can use to make the world a more livable place through enlightened social media interaction crowdfunding and other positive online engagements *Digital Technology and Sustainability* Mike Hazas, Lisa Nathan, 2017-11-22 This book brings together diverse voices from across the field of sustainable human computer interaction SHCI to discuss what it means for digital technology to support sustainability and how humans and technology can work together optimally for a more sustainable future Contemporary digital technologies are hailed by tech companies governments and academics as leading edge solutions to the challenges of environmental sustainability smarter homes more persuasive technologies and a robust Internet of Things hold the promise for creating a greener world Yet deployments of interactive technologies for such purposes often lead to a paradox they algorithmically optimize heating and lighting of houses without regard to the dynamics of daily life in the home they can collect and display data that allow us to reflect on energy and emissions yet the same information can cause us to raise our expectations for comfort and convenience they might allow us to share best practice for sustainable living through social networking and online communities yet these same systems further our participation in consumerism and contribute to an ever greater volume of electronic waste By acknowledging these paradoxes this book represents a significant critical inquiry into digital technology's longer term impact on ideals of sustainability Written by an interdisciplinary team of contributors this book will be of great interest to students and scholars of human computer interaction and environmental studies *The Technological System* Jacques Ellul, 2018-06-11 Some 20 years after writing *The Technological Society* Jacques Ellul realized how the totalistic dimensions of our modern technological milieu required an additional treatment of the topic Writing amidst the rise of books in the 1970s on pollution over population and environmental degradation Ellul found it necessary once again to write about the global presence of technology and its far reaching effects *The Technological System* represents a new stage in Ellul's research Previously he studied technological society as such in this book he approaches the topic from a systems perspective wherein he identifies the characteristics of technological phenomena and technological progress in light of system theory This leads to an entirely new approach to what constitutes the most important event of our society which has decisive bearing on the future of our world Ellul's analysis touches on all aspects of modern life not just those of a scientific or technological order In the end readers are compelled to formulate their own opinions and make their own decisions regarding the way a technique based value system affects every level of human life **Green Technology** Dustin Mulvaney, 2011-05-03 *Green Technology An A to Z Guide* explores the essential role of technology and its most recent developments toward a sustainable environment Twofold in its definition green technology includes the changing of existing technology toward energy conservation as well as the creation of new clean technology aimed at utilizing renewable resources With a primary focus on waste management the volume presents more than 150 articles in A to Z format featuring

such disciplines as nanoscience biochemistry information technology and environmental engineering Scholars and experts in their fields present a full range of topics from applications of green technology to The Green Grid global consortium to membrane technology and water purification systems to waste to energy technology This work culminates in an outstanding reference available in both print and electronic formats for academic university and public libraries Vivid photographs searchable hyperlinks an extensive resource guide numerous cross references and a clear accessible writing style make the Green Society volumes ideal for classroom use as well as for research

Technology for a Sustainable Future United States. Office of Science and Technology. Environmental Technology Strategy Staff,1994 *Just Technology* Thomas J. Siller,Gearold Johnson,2022-05-31 To address the complexity of today s global challenges requires new ways of thinking The idea that technology is always the best maybe only approach worth taking needs to be reconsidered Sustainable approaches must also draw from non technological areas To that end this book introduces the idea of just technology by rephrasing the idea of just war in order to include concepts of sustainability in future engineering design The book begins by defining justice and relating these definitions to technology This is followed by illustrating several notions of sustainability and the awareness that needs to be focused on societal challenges due to the finite resources available in the natural world Four questions are

enumerated to be addressed in order to qualify as a just use of technology 1 Is the harm being inflicted by the problem on the community the environment or humanity in general lasting serious and certain 2 Have all alternative solutions been investigated first including non technology based solutions Technology is the last choice not the first 3 Do we have confidence in the successful implementation of this technological solution and 4 Is the potential harm from the technological solution potentially worse than the issue being addressed Have all unintended consequences been considered that could arise from the technological solution The book ends with a description for implementing these questions into the traditional engineering design process Examples are included for reflection and help to understand how the design process proceeds

Environmental Technology and its Role in the Search for Urban Environmental Sustainability Santiago

Mejía-Dugand, 2015-05-18 The aim of this thesis is to analyze the role that environmental technology plays in the solution of environmental problems in cities and discuss models and conditions that can facilitate the processes of selection implementation and use of environmental technologies in and by cities The technological component is perhaps one of the most important characteristics of modern cities The dependence of humans on technology is in most cases a given something that is not ignored in the sustainability debate The development and implementation of new better technologies is however hindered by the inertia that modern societies have and the influence of the dominant systems e g economic systems based on growth extraction of natural resources and environmental disturbance So called environmental technologies are not always able to efficiently compete against other technologies that are embedded in societies by lock in mechanisms e g learning by doing and using scale economies subsidies and network externalities Even with the right technologies an exclusively techno centered approach to sustainability can result in other problems and it might reduce the sustainability debate and the cities role in it to discussions of an administrative nature The actual role of local actors and their agency must be also considered in the models and frameworks directed at understanding sustainability transition processes It is thus important to analyze the dynamics of technology selection implementation use and diffusion in cities from a stakeholders perspective as well Not only is the availability of technology of interest for understanding the impact it has on the environment but also the intensity of its use This has resulted in increased attention from politicians and scholars on the so called global cities e g London New York Tokyo which are characterized by their intense use of e g transport security and surveillance and information and communication Paradigmatic models of sustainability can however be contested when the role of local actors power and agency are considered in detail and not isolated from the context Some authors recognize the need to address what they call ordinary cities since focusing on the cities comparative level of development be it political economic or technological hinders the possibility of bidirectional learning In the end sustainability is a collective good which means that it is in everyone s interest to coordinate efforts and learn from the best practices regardless of where they come from This thesis focuses on ordinary cities and promises to offer conclusions that can contribute to a better understanding of how societies can learn

from each other and how environmental technologies can have deeper and better results when implemented in different contexts than the ones where they were developed Two questions related to the process of environmental technology adaptation are addressed in this thesis How do technology adaptation processes for the solution of urban environmental problems take place in cities And how do cities benefit from environmental technologies It is found that environmental technology is not only seen as a solution to environmental problems in cities but every day more as a component of strategies to attract attention and compete for resources in national and international markets Cities have different adaptation and learning strategies This means that technological solutions have to be flexible and adaptive to local conditions and allow for vernacular knowledge and past experiences to enrich their performance by facilitating their connection to existing systems Learning between cities is important and necessary for global sustainability transitions When it comes to environmental technology this process is facilitated by strong proof of concept projects Such projects are not only expected to be able to show their technical ability to solve a problem but must also offer contextual connections to the problems faced by interested cities or potential implementers

Environmental Policy and Technological Innovation Carlos Montalvo Corral, 2002 Environmental Policy and Technological Innovation comprehensively explores the factors which can influence a firm's behavioural approach towards developing clean technologies Unlike many other studies on environmental policy it addresses the origin of the problems and not just the symptoms

Energy, Society, and Environment David Elliott, 1997 Examines the potential and limits of technical solutions to environmental problems
