Technology Power In The Early American:

Technology and Power in the Early American Cotton Industry James Montgomery, David J. Jeremy, 1990 Behind the original publication of Montgomery's Practical Detail 1840 lay the continuing concern about world markets international economic technological leadership. Montgomery's achievement lay in the wealth reliability of the comparative data he assembled for the first time about the American British cotton industries which were then the high tech of industrializing societies. For the tech economics of production of the early 19th century cotton industries his work remains indispensable. A ms has recently surfaced in which Montgomery recorded the changes he intended for the 2nd ed of his classic. The vol is prefaced by a biog of Montgomery tracing his Scottish background his migration from Glasgow to New England in the 1830s an intro to the 2nd ed establishing its context. Appended to the Montgomery text are the documents of the justitia controversy from the Boston newspapers of 1841 in which the merits relative costs of steam water power were debated. Scholarly footnotes textual substantive are provided as appropriate. Illus

Early American Technology Judith A. McGaw, 2014-01-01 This collection of original essays documents technology's centrality to the history of early America. Unlike much previous scholarship this volume emphasizes the quotidian rather than the exceptional the farm household seeking to preserve food or acquire tools the surveyor balancing economic and technical considerations while laying out a turnpike the woman of child bearing age employing herbal contraceptives and the neighbors of a polluted urban stream debating issues of property odor and health. These cases and others drawn from brewing mining farming and woodworking enable the authors to address recent historiographic concerns including the environmental aspects of technological change and the gendered nature of technical knowledge. Brooke Hindle's classic 1966 essay on early American technology is also reprinted and his view of the field is reassessed. A bibliographical essay and summary of Hindle's bibliographic findings conclude the volume. The contributors are Judith A McGaw Robert C Post Susan E Klepp Michal McMahon Patrick W O Bannon Sarah F McMahon Donald C Jackson Robert B Gordon Carolyn C Cooper and Nina E Lerman

Technology in Early America Brooke Hindle, 2012-12-01 This interpretative essay and extensive bibliography surveying the chronology and major characteristics of American technology before 1850 is the first available guide in this period to the rapidly developing field of the history of technology. Material Culture Kenneth L. Ames, 1985 *The Age of Machinery* Gillian Cookson, 2018 An engagingly written account of textile engineering in its key northern centres rich with historical narrative and analysis The engineers who built the first generations of modern textile machines between 1770 and 1850 pushed at the boundaries of possibility This book investigates these pioneering machine makers almost all working within textile communities in northern England and the industry they created It probes their origins and skills the sources of their inspiration and impetus and how it was possible to develop a high tech factory centred world leading marketin textile machinery virtually from scratch The story of textile engineering defies classical assumptions about the driving forces behind the Industrial Revolution The circumstances of its birth and the personal affiliationsat work during periods of exceptional creativity suggest that the potential to accelerate economic growth could be found within social assets and craft skills Appreciating textile engineering within its own time and context challenges views inherited from Victorian thinkers who tended to ascribe to it features of the fully fledged industry they saw before them The Age of Machinery is an engagingly written account of the trade in its key northern centres devoid of jargon and yet tightly argued equally rich with historical narrative and analysis It will be invaluable not only to students and scholars of British economic history and the Industrial Revolution but also to social scientists looking at human agency and its contribution to economic growth and innovation GILLIAN COOKSON holds a DPhil in economic history and has been employed since 1995 in academic research and consultancy including as county editor Victoria County History of Durham

The Machine in the University Terry S. Reynolds, 1987 *The Cumulative Book Index*, 1990 A world list of books in the English language *Nuclear Politics in America* Robert J. Duffy, 1997 Duffy s work traces nuclear politics from the creation of a powerful subgovernment through the public lobby reforms of the late 1960s and early 1970s and the deregulatory backlash of the Reagan years He demonstrates that while policies did change in the 1970s they did not change as much as other accounts have suggested and that the industry continued to receive considerable federal support The book is particularly significant for extending the discussion of nuclear policy through the Bush and Clinton years including the
