Spontaneous Formation Of Space Time Structures And Criticality:

Spontaneous Formation of Space-Time Structures and Criticality T. Riste,David Sherrington,2012-12-06 This volume contains the proceedings of a NATO Advanced study Institute held at Geilo Norway between 2 12 april 1991 This institute was the eleventh in a series held biannually at Geilo on the subject of phase transitions It was intended to capture the latest ideas on selforganized patterns and criticality The Institute brought together many lecturers students and active researchers in the field from a wide range of NATO and non NATO countries The main financial support came from the NATO scientific Affairs Division but additional support was obtained from the Norwegian Research Council for Science and the Humanities NAVF and Institutt for energi teknikk The organizers would like to thank all these contributors for their help in promoting an exciting and rewarding meeting and in doing so are confident that they echo the appreciation of all the participants In cooperative equilibrium systems physical states are described by spatio temporal correlation functions The intimate connection between space and time correlations is especially apparent at the critical point the second order phase transition where the spatial range and the decay time of the correlation function both become infinite The salient features of critical phenomena and the history of the development of this field of science are treated in the first chapter of this book

Chaos, Dynamics, and Fractals Joseph L. McCauley,1994-05-26 This book develops deterministic chaos and fractals from the standpoint of iterated maps but the emphasis makes it very different from all other books in the field It provides the reader with an introduction to more recent developments such as weak universality multifractals and shadowing as well as to older subjects like universal critical exponents devil's staircases and the Farey tree The author uses a fully discrete method a theoretical computer arithmetic because finite but not fixed precision cannot be avoided in computation or experiment This leads to a more general formulation in terms of symbolic dynamics and to the idea of weak universality The connection is made with Turing's ideas of computable numbers and it is explained why the continuum approach leads to predictions that are not necessarily realized in computation or in nature whereas the discrete approach yields all possible histograms that can be observed or computed

Self-Organised Criticality Gunnar Pruessner,2012-08-30 An overview of results and methods written for graduates and researchers in physics mathematics biology sociology finance medicine and engineering

Critical Phenomena in Natural Sciences Didier Sornette,2013-04-17 Concepts methods and techniques of statistical physics in the study of correlated as well as uncorrelated phenomena are being applied ever increasingly in the natural sciences biology and economics in an attempt to understand and model the large variability and risks of phenomena This is the first textbook written by a well known expert that provides a modern up to date introduction for workers outside statistical physics The emphasis of the book is on a clear understanding of concepts and methods while it also provides the tools that can be of immediate use in applications Although this book evolved out of a course for graduate students it will be of great interest to researchers and engineers as well as to post docs in geophysics and meteorology

Physics Briefs ,1992

Treatise on Geophysics ,2015-04-17 Treatise on Geophysics Second Edition is a comprehensive and in depth study of the physics of the Earth beyond what any geophysics text has provided previously Thoroughly revised and updated it provides fundamental and state of the art discussion of all aspects of geophysics A highlight of the second edition is a new volume on Near Surface Geophysics that discusses the role of geophysics in the exploitation and conservation of natural resources and the assessment of degradation of natural systems by pollution Additional features include new material in the Planets and Moon Mantle Dynamics Core Dynamics Crustal and Lithosphere Dynamics Evolution of the Earth and Geodesy volumes New material is also presented on the uses of Earth gravity measurements This title is essential for professionals researchers professors and advanced undergraduate and graduate students in the fields of Geophysics and Earth system science Comprehensive and detailed coverage of all aspects of geophysics Fundamental and state of the art discussions of all research topics Integration of topics into a coherent whole **Annales géologiques des pays helléniques** ,2000
