Computers are supposed to be smart yet they frustrate both ordinary users and computer technologists Why are people frustrated by smart machines Computers don t fit people People think in terms of comparisons stories and analogies and seek feedback whereas computers are based on a fundamental design that does not fit with analogical and feedback thinking They impose a binary an all or nothing approach to everything Moreover the social world and institutions that have developed around computer technology hide and reinforce the lack of alignment between computers and people This book suggests a solution we do not have to accept the way things are now and work around the bad social and technical design of computers Rather it proposes a diverse distributed critical discussion of how to design and build both computer technology and its social institutions **The Industries of Russia..** Russia.
