Lees,Dianne Edwards,1993 Evolution is the central theme of all biology Research in the many branches of evolutionary study continues to flourish This book based on a symposium of the Linnean Society discusses the diversity in current evolutionary research It approaches the subject ambitiously and from several angles bringing together eminent authors from a variety of disciplines paleontologists traditionally with a macroevolutionary bias neontologists concentrating on microevolutionary processes and those studying the very essence of evolution the process of speciation in living organisms Evolutionary Patterns and Processes will appeal to a broad spectrum of professional biologists working in such fields as paleontology population biology and evolutionary genetics Biologists will enjoy chapters by Stephen J. Gould discovering in the much earlier work of Hugo de Vries parallels with his ideas on punctuational evolution Guy Bush considering why there are so many small animals Peter Sheldon examining detailed fossil trilobite sequences for evidence of microevolutionary processes and considering models of speciation as well as others dealing with cytological ecological and behavioral processes leading to the evolution of new species None **Taxonomy, Phytogeography and Evolution.
