Parallel Problem Solving from Nature, PPSN XI Robert Schaefer, Carlos Cotta, Joanna Kolodziej, Günter Rudolph, 2010-09-13 We are very pleased to present to you this LNCS volume the proceedings of the 11th International Conference on Parallel Problem Solving from Nature PPSN 2010 PPSN is one of the most respected and highly regarded conference series in evolutionary computation and indeed in natural computation as well This biennial event was first held in Dortmund in 1990 and then in Brussels 1992 Jerusalem 1994 Berlin 1996 Amsterdam 1998 Paris 2000 Granada 2002 Birmingham 2004 Reykjavik 2006 and again in Dortmund in 2008 PPSN 2010 received 232 submissions After an extensive peer review process involving more than 180 reviewers the program committee chairs went through all the review reports and ranked the papers according to the reviewers comments Each paper was evaluated by at least three reviewers Additional reviewers from the appropriate branches of science were invoked to review interdisciplinary papers The top 128 papers were finally selected for inclusion in the proceedings and presentation at the conference This represents an acceptance rate of 55% which guarantees that PPSN will continue to be one of the conferences of choice for bio inspired computing and metaheuristics researchers all over the world who value the quality over the size of a conference The papers included in the proceedings volumes cover a wide range of topics from evolutionary computation to swarm intelligence from bio inspired computing to real world applications Machine learning and mathematical games supported by evolutionary algorithms as well as memetic agent oriented systems are also represented They all are the latest and best in natural computation The proceedings are composed of two volumes divided into nine thematic sections

Fundamentals of Numerical

Reservoir Simulation D.W. Peaceman, 2000-04-01 The use of numerical reservoir simulation with high speed electronic computers has gained wide acceptance throughout the petroleum industry for making engineering studies of a wide variety of oil and gas reservoirs throughout the world These reservoir simulators have been designed for use by reservoir engineers who possess little or no background in the numerical mathematics upon which they are based In spite of the efforts to improve numerical methods to make reservoir simulators as reliable efficient and automatic as possible the user of a simulator is faced with a myriad of decisions that have nothing to do with the problem to be solved This book combines a review of some basic reservoir mechanics with the derivation of the differential equations that reservoir simulators are designed to solve

applied examples for greenhouse systems harvesting technology and plant factory systems

Metal-Ligand Interactions: From Atoms, to Clusters, to Surfaces Dennis R. Salahub, N. Russo, 2012-12-06 Metal ligand interactions are currently being studied in different fields from a variety of points of view and recent progress has been substantial. Whole new classes of compounds and reactions have been found. An arsenal of physical methods has been developed. Mechanistic detail can be ascertained to an increasingly minute degree and the theory is being developed to handle systems of ever growing complexity. As usual, such multidisciplinary leads to great opportunities coupled with great problems of communication between specialists. It is in its promotion of interactions across these fields that *Metal Ligand Interactions: From Atoms to Clusters to Surfaces* makes its timely contribution. The tools, both theoretical and experimental, are highly developed and fundamental questions remain unanswered. The most fundamental of these concerns the nature of the microscopic interactions between metal atoms, clusters, surfaces, and ligands: atoms, molecules, absorbates, reagents, products, and the changes in these interactions during physical and chemical transformation. In *Metal Ligand Interactions*, leading experts discuss the following vital aspects: *ab initio* theory, semi-empirical theory, density functional theory, complexes and clusters, surfaces and catalysis.
