Easwaramoorthy, A. Gowrisankar, 2020-12-14 This book introduces the fractal interpolation functions FIFs in approximation theory to the readers and the concerned researchers in advanced level FIFs can be used to precisely reconstruct the naturally occurring functions when compared with the classical interpolants The book focuses on the construction of fractals in metric space through various iterated function systems It begins by providing the Mathematical background behind the fractal interpolation functions with its graphical representations and then introduces the fractional integral and fractional derivative on fractal functions in various scenarios Further the existence of the fractal interpolation function with the countable iterated function system is demonstrated by taking suitable monotone and bounded sequences It also covers the dimension of fractal functions and investigates the relationship between the fractal dimension and the fractional order of fractal interpolation functions Moreover this book explores the idea of fractal interpolation in the reconstruction scheme of illustrative waveforms and discusses the problems of identification of the characterizing parameters In the application section this research compendium addresses the signal processing and its Mathematical methodologies A wavelet based denoising method for the recovery of electroencephalogram EEG signals contaminated by nonstationary noises is presented and the author investigates the recognition of healthy epileptic EEG and cardiac ECG signals using multifractal measures This book is intended for professionals in the field of Mathematics Physics and Computer Science helping them broaden their understanding of fractal functions and dimensions while also providing the illustrative experimental applications for researchers in biomedicine and neuroscience      *Finer Thermodynamic Formalism - Distance Expanding Maps and Countable State Subshifts of Finite Type, Conformal GDMSs, Lasota-Yorke Maps and Fractal Geometry* Mariusz Urbański, Mario Roy, Sara Munday, 2022-06-06 This book consists of three volumes The first volume contains introductory accounts of topological dynamical systems finite state symbolic dynamics distance expanding maps and ergodic theory of metric dynamical systems acting on probability measure spaces including metric entropy theory of Kolmogorov and Sinai More advanced topics comprise infinite ergodic theory general thermodynamic formalism topological entropy and pressure Thermodynamic formalism of distance expanding maps and countable alphabet subshifts of finite type graph directed Markov systems conformal expanding repellers and Lasota Yorke maps are treated in the second volume which also contains a chapter on fractal geometry and its applications to conformal systems Multifractal analysis and real analyticity of pressure are also covered The third volume is devoted to the study of dynamics ergodic theory thermodynamic formalism and fractal geometry of rational functions of the Riemann sphere      **Positive Transfer Operators And Decay Of Correlations**

Viviane Baladi,2000-07-12 Although individual orbits of chaotic dynamical systems are by definition unpredictable the average behavior of typical trajectories can often be given a precise statistical description Indeed there often exist ergodic invariant measures with special additional features For a given invariant measure and a class of observables the correlation functions tell whether and how fast the system mixes i e forgets its initial conditions This book addressed to mathematicians and mathematical or mathematically inclined physicists shows how the powerful technology of transfer operators imported from statistical physics has been used recently to construct relevant invariant measures and to study the speed of decay of their correlation functions for many chaotic systems Links with dynamical zeta functions are explained The book is intended for graduate students or researchers entering the field and the technical prerequisites have been kept to a minimum

**Mathematical Reviews** ,2007      **Open Systems and Measurement in Relativistic Quantum Theory** Heinz-Peter Breuer,Francesco Petruccione,1999-06-21 This book treats modern aspects of open systems measurement and decoherence in relativistic quantum theory It starts with a comprehensive introduction to the problems related to measuring local and nonlocal observables and the constraints imposed by the causality principle In the articles that follow the emphasis lies on new theoretical models Quantum dynamical semigroups and stochastic processes in Hilbert space are introduced as are dynamical reduction models Further topics include relativistic generalizations of the continuous spontaneous localization model and of the quantum state diffusion model and decoherence and the dynamical selection of preferred basis sets in the framework of continuous measurement theory and of the decoherent histories approach Mathematical aspects of quantum measurement theory and dynamical entropies are also studied from the viewpoint of the operational approach to quantum mechanics      *Mathematics of Complexity and Dynamical Systems* Robert A.
