Introduction

The following is an attempt to put together a complete, yet reasonably flexible template for the specification of software designs. Wherever possible, I have tried to provide guidelines (instead of prescribing requirements) for the contents of various sections and subsections of the document. Some may prefer to require more detailed subsections of a particular section, choosing one or more of the subsection topics from the list of guidelines provided. In this sense, this document is really a template for a template.

In devising this template, I have gleaned information from many sources, including various texts on Software Engineering (Pressman, Sommerville, and Van Vliet), Object-Oriented Development (Booch, Rumbaugh, Berard, and Wirfs-Brock), various SEI reports, DoD-Std and Mil-Std documentation requirements (2167/2167A), and IEEE documentation standards (particularly IEEE-1016 for software designs, and IEEE-830 for software requirements). I have made every effort *not* to assume or impose a particular software

Software Engineering James F. Peters, Witold Pedrycz, 2000 A clear cut practical approach to software development Emphasizing both the design and analysis of the technology Peters and Pedrycz have written a comprehensive and complete text on a quantitative approach to software engineering As you read the text you ll learn the software design practices that are standard practice in the industry today Practical approaches to specifying designing and testing software as well as the foundations of Software Engineering are also presented And the latest information in the field additional experiments and

solutions to selected problems are available at the authors s web site <http://www.ee.umanitoba.ca/clib/main.html> Key Features Thorough coverage is provided on the quantitative aspects of software Engineering including software measures software quality software costs and software reliability A complete case study allows students to trace the application of methods and practices in each chapter Examples found throughout the text are in C and Java A wide range of elementary and intermediate problems as well as more advanced research problems are available at the end of each chapter Students are given the opportunity to expand their horizons through frequent references to related web pages

A Methodology, Specification Language, and Automated Support Environment for Computer-aided Design Systems Duane Robert Worley,Rand Corporation,1986 Computer based systems are becoming increasingly complex and expensive and there is a need for extensive design prior to embarking upon costly implementation phases Many design tools and design techniques have been proposed and some have been built to stand alone They are at best loosely integrated with other tools They have much in common notably the construction and manipulation of models of the complex system under design and a high degree of interactivity A detailed study of areas of commonality guides the requirements definition of a computer aided design of computer systems CADPCS support nucleus The nucleus provides an integrated set of primitives A specification language targeted to the support nucleus allows description of the design model and human model interaction This paper hypothesizes that it is possible to define a methodology a specification language and an automated support environment suitable to the systematic development and execution of CADPCS systems The methodology is applied to UCLA s Systems Architect s Apprentice SARA system the test bed and the resulting SARA IDEAS system serves as an existence proof for the hypothesis
