Software Engineering Essentials: The supporting processes Richard Hall Thayer, Merlin Dorfman, 2013 *Web-based Support Systems* JingTao Yao, 2010-03-02 Web based Support Systems WSS are an emerging multidisciplinary research area in which one studies the support of human activities with the Web as the common platform medium and interface. The Internet affects every aspect of our modern life. Moving support systems to online is an increasing trend in many research domains. One of the goals of WSS research is to extend the human physical limitation of information processing in the information age. Research on WSS is motivated by the challenges and opportunities arising from the Internet. The availability, accessibility, and exhibility of information as well as the tools to access this information lead to a vast amount of opportunities. However, there are also many challenges we face. For instance, we have to deal with more complex tasks as there are increasing demands for quality and productivity. WSS research is a natural evolution of the studies on various computerized support systems such as Decision Support Systems (DSS), Computer Aided Design (CAD), and Computer Aided Software Engineering (CASE). The recent advancement of computer and Web technologies make the implementation of more feasible WSS. Nowadays it is rare to see a system without some type of Web interaction. The research of WSS is classified into four groups: WSS for specific domains.

Software engineering essentials volume II: the supporting processes & Merlin Dorfman, Richard Hall Thayer, *Signal*, 1985 *The Impact of Computer Supported Technologies on Information Systems Development* Kenneth E. Kendall, Kalle Lyytinen, Janice I. DeGross, 1992 A major research stream in computing focuses on building computing technologies which ease the specification, design, implementation, and management of information systems. Any computer solution that frees the developer to interact directly with users or the physical configuration of the computing technology or improves any feature of the act of delivering a computing application can be called a support technology. In this volume, the focus is on the impacts of computer-assisted software engineering tools. CASE tools for group cooperation and collaboration, also called group decision support system or GDSS, and other computer-supported technologies. The lead paper by Lyytinen and Kendall provides a framework for the volume, showing how the contributions fall into groups revealing the progress of research in each individual area. In addition,

to contributed papers three authors were invited to send lively controversial papers These three articles were written by Bill Curtis Matthias Jarke and Paul Gray **Software Engineering with Formal Metrics** Lem O.
