*Solar Radiation Data* Willeke Palz, 2012-12-06 This book gives a comprehensive overview of activities currently under way to produce collect and compile radiation data as needed for the various types of solar energy applications in Europe. Contributions have been made by all contractors of the Commission of the European Communities in particular the Meteorological Offices of the EC member countries. They all reported on their work at a meeting which was held in October 1982 in Brussels and of which these are the proceedings. The Commission work in this area follows a detailed strategy which was published earlier as part of the proceedings of Volume I Series F. Series F is especially devoted to publications on the European Communities work on solar radiation data. Other volumes within Series F are in preparation and will deal with solar radiation data on tilted planes, solar radiation data derived from meteorological satellite observations. In addition two new atlases are being prepared, one showing for the area of the European Community maps for solar radiation on tilted planes of various inclinations and orientations and the other showing for the whole of Europe and the Eastern part of the Mediterranean radiation data for horizontal planes. In the latter there will also be a statistical analysis section. Both atlases will be published in the course of 1983.

*Solar Radiation Data Sources, Applications, and Network Design* Kenneth E. Johnson Environmental and Energy Center, 1978 A prerequisite to considering solar energy projects is to determine the requirements for information about solar radiation to apply to possible projects. This report offers techniques to help the reader specify requirements in terms of solar radiation data and information currently available. It describes the past and present programs to record and present information to be used for most requirements, presents courses of action to help the user meet his needs for information, lists sources of solar radiation data and presents the problems, costs, benefits and responsibilities of programs to acquire additional solar radiation data. Extensive background information is provided about solar radiation data and its use. Specialized information about recording, collecting, processing, storing and disseminating solar radiation data is given. Several Appendices are included which provide reference material for special situations.

[Modeling Solar Radiation at the Earth's Surface](#) Viorel Badescu, 2008-02-01 Solar radiation data is important for a wide range of applications e.g. in engineering, agriculture, health sector and in many fields of the natural sciences. A few examples showing the diversity of applications may include architecture and building design e.g. air conditioning and cooling systems, solar heating system design and use, solar power generation, evaporation and irrigation, calculation of water requirements for crops, monitoring plant growth and disease control, skin cancer research.

**Evaluation of the National Solar Radiation Database (NSRDB)**, 2017 This paper validates the performance of the physics based Physical Solar Model PSM data set in the National Solar Radiation Data Base NSRDB to quantify the accuracy of the magnitude and the spatial and temporal variability of the solar radiation data. Achieving higher penetrations of solar energy on the electric grid and reducing integration costs requires accurate knowledge of the available solar resource. Understanding the impacts of clouds and other meteorological constituents on the solar resource and quantifying intra, inter hour, seasonal and interannual variability are essential for accurately designing utility scale solar energy projects. Solar resource information can be obtained from ground based measurement stations and/or from modeled data sets. The availability of measurements is scarce both temporally and spatially because it is expensive to maintain a high density solar radiation measurement network that collects good quality data for long periods of time. On the other hand, high temporal and spatial resolution gridded satellite data can be used to estimate surface radiation for long periods of time and is extremely useful for solar energy development. Because of the advantages of satellite based solar resource assessment, the National Renewable Energy Laboratory developed the PSM. The PSM produced gridded solar irradiance, global horizontal irradiance (GHI), direct normal irradiance (DNI) and diffuse horizontal irradiance for the NSRDB at a 4 km by 4 km spatial resolution and half hourly temporal resolution, covering the 18 years from 1998 to 2015. The NSRDB also contains additional ancillary meteorological data sets such as temperature, relative humidity, surface pressure, dew point and wind speed. Details of the model and data are available at <https://nsrdb.nrel.gov>. The results described in this paper show that the hourly averaged satellite derived data have a systematic bias error of approximately 5% for GHI and less than 10% for DNI; however, the scatter root mean square error (RMSE) difference is higher for the hourly averages.

*Solar Energy Applications to Buildings and Solar Radiation Data* T.C. Steemers, 2012-12-06 This volume provides a valuable overview of the Commission's current activities in research on solar radiation data and in the development of solar energy applications in buildings. It contains the proceedings of the second contractors' coordination meeting in the third four

year R D programme 1985 88 in these two fields which was held in Brussels on 1 and 2 October 1987 The first meeting was held on 13 and 14 November 1986 The research contractors reports presented in this book give a full account of activities at an important stage in the programme where most projects have completed their preparatory stages and productive research is now fully underway A feature of the reports is the pattern they illustrate of working groups in which practically all of the Member states are represented co operating in the attainment of common goals within a co ordinated European programme The meeting was attended by 60 participants and extended over two days Presentations were made by the contractors on the objectives of their projects progress made in the research and future work plans and priorities Each presentation was followed by a short discussion The meeting was also important in improving communications between the research groups exposing opportunities for co operation and collaboration and monitoring progress Among key achievements reported in the area Solar Radiation Data is the implementation of a network of measuring stations at eight proto typical sites throughout Europe
