Jayawardena, 2022-12-30 Water is a precious resource essential for all forms of life and although there is plenty of water to meet the demand for the present population and even for a projected population of 9 billion there is significant spatial and temporal variation in its distribution This results in water rich and water poor countries water related conflicts and unsafe drinking water a major killer identified by the World Health Organization WHO Water for Life Drinking Water Health Food Energy Nexus covers these issues highlighting the multi facted uses and importance of water in life water resources chemistry of water drinking water and the links between water and health food irrigation soil energy transport industry recreation disasters and conflicts The book is accessible and clear with technical elements It is ideal as a background supplementary text to support more specialist study across civil engineering geography and social sciences and will guide readers to see the big picture of environmentally sustainable water management for all human and other biotic lives **Climate Variability and Water Dependent Sectors** Dannele E. Peck, Jeffrey M. Peterson, 2016-02-22 Demand for water in agricultural municipal industrial and environmental uses is growing More frequent and severe extreme weather conditions now exacerbate water shortages in many locations and existing infrastructure to store and release water rarely has the capacity to both prevent floods during wet periods and meet demand during drought periods Competition among sectors adds pressure not only on water infrastructure but also on management policies and allocation institutions This book of contributed chapters assesses the performance of existing infrastructure institutions and policies under different climate

variability scenarios It also provides suggestions for minimizing conflict over scarce water resources More flexible water allocation institutions and management policies and better tools for decision making under uncertainty will be required to maximize society's net benefit from less reliable water resources The chapters show how incentives for individuals to conserve water and policies for helping vulnerable populations prepare for and recover from extreme events will also need to be improved This book was originally published as a special issue of the Journal of Natural Resources Policy Research
