The Mathematics Of Meaning:

The Mathematics of Meaning Svend Østergaard, 1997 The Mathematics of Meaning examines the foundation of mathematics the fictions of Jose Luis Borges and the aesthetics of Marcel Proust as it is unfolded in Remembrance of Things Past In mathematics the logical foundation of reasoning is examined In Borges it is the linguistic foundation of narration and in Proust the perceptual foundation of aesthetics The three types of studies converge towards the same point because it turns out that in all cases where the foundation becomes indeterminable the concept of infinity plays a decisive role The dynamics of mathematics is decisively dependent on the assumption of the existence of infinite sets In Borges the breakdown of narration is metaphorically staged through an impossible object representing an actual infinity In Proust it is the concept of infinity implied in Leibniz monadism The Mathematics of Meaning also contains a semiotic theory of form because the breakdown of the foundation is in all three cases uniquely connected to the existence of a form the meaning of which is indeterminable in the situation

The Emergence of Mathematical Meaning Paul Cobb, Heinrich Bauersfeld, 2012-12-06 This book grew out of a five year collaboration between groups of American and German mathematics educators The central issue addressed accounting for the messiness and complexity of mathematics learning and teaching as it occurs in classroom situations The individual chapters are based on the view that psychological and sociological perspectives each tell half of a good story To unify these concepts requires a combined approach that takes individual students mathematical activity seriously while simultaneously seeing their activity as necessarily socially situated Throughout their collaboration the chapter authors shared a single set of video recordings and transcripts made in an American elementary classroom where instruction was generally compatible with recent reform recommendations As a consequence the book is much more than a compendium of loosely related papers The combined approach taken by the authors draws on interactionism and ethnomethodology Thus it constitutes an alternative to Vygotskian and Soviet activity theory approaches The specific topics discussed in individual chapters include small group collaboration and learning the teacher's practice and growth and language discourse and argumentation in the mathematics classroom This collaborative effort is valuable to educators and psychologists interested in situated cognition and the relation between sociocultural processes and individual psychological processes

Windows on Mathematical Meanings Richard Noss, Celia Hoyles, 1996-06-30 This book challenges some of the conventional wisdoms on the learning of mathematics The authors use the computer as a window onto mathematical meaning making The pivot of their theory is the idea of webbing which explains how someone struggling with a new mathematical idea can draw on supportive knowledge and reconciles the individual's role in mathematical learning with the part played by epistemological social and cultural forces
