**Developments in Astrometry and Their Impact on Astrophysics and Geodynamics** Ivan I. Mueller, Barbara Kolaczek, 2013-12-01 In this review talk I would like to report on the proper motion analysis which has been recently carried out together with M Soma and M Yoshizawa There has been a persistent demand in astronomy for accurate stellar positions and proper motions which are represented by an inertial reference system constructed on the basis of a set of consistent astronomical constants In the reference system the precessional constant plays a primary role In a series of papers Fricke 1967a b 1977a b has determined the luni solar precessional correction to Newcomb s value and the fictitious motion of the equinox which have been adopted in the IAU 1976 System of Astronomical Constants Based on the precessional correction and the equinoctial motion thus established the fundamental reference system the FK5 system Fricke et al 1988 for positions and proper motions has been constructed However for several years geodetic VLBI McCarthy Luzum 1991 and LLR Williams et al 1991 observations have been suggesting an additional correction to the luni solar precessional constant of the IAU 1976 System That is these observations indicate the precessional correction of 6 p 0 30 cent to the FK5 system But the observational period of the earth orientation is considered to be still insufficient to separate unambiguously the precessional change of the earth orientation from the nutation with the longest period of 18 6 years
