and flaws in their reasoning systems using cognitive heuristics intuitive gut feel decision making processes which bypass the proper consultation of reasons Furthermore if we look at how animals infants and adults under time or other pressures understand the actions of others what we find is that they appeal to simpler systems e g looking only at environmental factors and overt behaviour providing a route to action understanding that circumvents attribution of reasons and reasoning In short then experimental findings show that common sense psychology is wrong This book is an attempt to reject that line of argument and defend the common sense perspective vindicating the core philosophical idea that in the typical case people do what they do for the reasons they have
