Spikes Snow:

Snow, Ice and Other Wonders of Water Ivar Olovsson, 2016 The book illustrates the fascinating world of the different forms of water from ice and snow to liquid water. The water molecule H₂O is the second most common molecule in the Universe behind hydrogen H₂ and ice is the most abundant solid material. Snow and ice appear in a countless large number of different shapes and with properties which can be quite different. Detailed knowledge of the properties of snow is of great importance for the Sami people involved in reindeer herding and several hundred names are used to characterize the different types. The properties of ice and liquid water are very special and unique in several respects. In contrast to most other substances the density of ice is lower than that of liquid water which has many very important consequences in our daily life. Water plays a unique role in chemistry and although tremendous research has been spent on this seemingly simple substance there are still many unsolved questions about the structure of liquid water. The special properties of water are due to hydrogen bonding between the H₂O molecules and this book may be seen as a tribute to the hydrogen bond. The general properties of the hydrogen bond are treated in three separate papers. The hydrogen bond is of fundamental importance in biological systems since all living matter has evolved from and exists in an aqueous environment and hydrogen bonds are involved in most biological processes. There is a hundred times more water molecules in our bodies than the sum of all the other molecules put together. Provided by publisher *System for Chipping and Moving Ice* John D. Bennett, 1975 *The Grammar of Genes* Ángel López García, 2005 Mankind is the only speaking species on earth. Hence language is supposed to have a genetic basis no matter whether it relies on general intelligence or on a linguistic module. This study proposes that universal formal properties of the linguistic code emerged from the genetic code through duplication. The proportion of segmental duplication is clearly higher in the human genome than in any other species and duplication took place 6 million years ago when humans separated from the other hominid branches. The evolution of language is therefore supposed to be a gradual process with a break. This book describes a lot of striking formal resemblances the genetic code and the linguistic code hold in common. The book aims to reconcile generative grammar with cognitive semiotics showing that both of them constitute instances of embodiment. **Ice Hunt** James Rollins, 2009-10-13 A classic adventure from James Rollins the author of *The Doomsday Key* *The Last Oracle* *The Judas Strain* *Black Order* and other pulse pounding New York Times bestselling thrillers. *Ice Hunt* carries readers to the top of the world where nothing can survive except fear.
