## **The Medicine Makers:**

**The American Journal of the Medical Sciences** ,1855      Making Medical Knowledge Miriam Solomon,2015-04-03

How is medical knowledge made New methods for research and clinical care have reshaped the practices of medical knowledge production over the last forty years Consensus conferences evidence based medicine translational medicine and narrative medicine are among the most prominent new methods Making Medical Knowledge explores their origins and aims their epistemic strengths and their epistemic weaknesses Miriam Solomon argues that the familiar dichotomy between the art and the science of medicine is not adequate for understanding this plurality of methods The book begins by tracing the development of medical consensus conferences from their beginning at the United States National Institutes of Health in 1977 to their widespread adoption in national and international contexts It discusses consensus conferences as social epistemic institutions designed to embody democracy and achieve objectivity Evidence based medicine which developed next ranks expert consensus at the bottom of the evidence hierarchy thus challenging the authority of consensus conferences Evidence based medicine has transformed both medical research and clinical medicine in many positive ways but it has also been accused of creating an intellectual hegemony that has marginalized crucial stages of scientific research particularly scientific discovery Translational medicine is understood as a response to the shortfalls of both consensus conferences and evidence based medicine Narrative medicine is the most prominent recent development in the medical humanities Its central claim is that attention to narrative is essential for patient care Solomon argues that the differences between narrative medicine and the other methods have been exaggerated and offers a pluralistic account of how the all the methods interact and sometimes conflict The result is both practical and theoretical suggestions for how to improve medical knowledge and understand medical controversies

**Public Health and Municipal Policy Making** Marjaana Niemi,2016-04-15 Public health policies had a profound impact on urban life in the late nineteenth and early twentieth centuries yet relatively few people took an active interest in the formulation of these policies In this book Marjaana Niemi examines the impact of different political aims and pressures on scientific health policies through the analysis of public health programmes in two case studies one in Birmingham and the other in Gothenburg By examining early twentieth century campaigns concerned with infant welfare and the prevention of tuberculosis the book provides illuminating insights into the relationship between public health and the regulation of urban life Not only does the book analyse the processes whereby different political aims became embedded in these apolitical health campaigns but it also highlights the important part that the campaigns played in urban politics and governance The political aims which public health campaigns advanced are explored by comparing health policies in Britain and Sweden where officials were part of one public health community enjoying close links attending the same conferences and contributing to the same journals The problems they dealt with were often similar and in both countries health authorities claimed scientific grounds for their programmes Yet the policies they pursued were often

strikingly different Through examination of two different national approaches the book does justice to the full complexity of the policy making process and illuminates the wide range of factors that affected municipal policies
