

# Statistical Methods and Modal Decompositions for Gridded and Scattered Data: Meshless Statistics and Meshless Data Driven Modal Analysis

Miguel A. Mendez\*, Manuel Ratz, Damien Rigutto  
von Karman Institute for Fluid Dynamics

3 December 2024

Statistical tools are crucial for studying and modeling turbulent flows, where chaotic velocity fluctuations span a wide range of spatial and temporal scales. Advances in image velocimetry, especially in tracking-based methods, now allow for high-speed, high-density particle image processing, enabling the collection of detailed 3D flow fields.

This lecture provides a set of tutorials on processing such datasets to extract essential quantities like averages, second-order moments (turbulent stresses) and coherent patterns using modal decompositions such as the Proper Orthogonal Decomposition (POD).

After a brief review of the fundamentals of statistical and modal analysis, the lecture delves into the challenges of processing scattered data from tracking velocimetry, comparing it to traditional gridded-data approaches. It also covers research topics, including physics-based Radial Basis Function (RBF) regression for meshless computation of turbulent statistics and the definition of an RBF inner product, which enables meshless computation of data-driven decompositions. These include traditional methods like Proper Orthogonal Decomposition (POD) and Dynamic Mode Decomposition (DMD), as well as advanced variants such as Spectral POD (SPOD) and Multiscale POD (mPOD). We refer to this approach as the 'Meshless Data-Driven Decomposition' framework. We refer to this framework as 'Meshless Data Driven Decomposition'.

Six exercises in Python are provided. All codes are available at [this github repository](#).

NOTE 1: This lecture is an updated version of the lecture "Statistical Treatment, Fourier, and Modal Decomposition", which was given in the previous edition of the lecture series and can be found in <https://arxiv.org/abs/2201.03847>. Here the session on traditional modal decompositions has been shortened to give more space to the idea of meshless computation of statistics and data-driven decompositions.

NOTE 2: These lecture notes are now being expanded into a book, covering statistics, traditional (gridded) modal analysis, constrained RBF and meshless modal analysis. Stay tuned for more :) !
