K. Majumdar, 2002-01-01 The purpose of this book is to help social scientists get a feel of statistics what it is about how and when to use its various techniques and how these tools can help in analysing results It lays a foundation in the statistical analysis of social data through a simple and easy to understand approach Increased use of complex and multivariate statistical models in social data analysis acts as a compulsion for a social scientist to become conversant with some of these tools The bewildering array of alternatives can baffle any researcher if he does not know how and what to choose for his data Thus how to do has now come to be replaced by why do and what of it to do This book addresses many of these issues besides dealing with the mechanics of computation for commonly used statistics Written in a straightforward and lucid manner using a minimum of technical jargon the book has numerous diagrams and tables to illustrate important concepts It also has an intensive collection of acronyms glossary statistical tables and a comprehensive index **Statistics: a Tool for the Social Sciences : Study Guide** Larson, Richard F, Ott, Lyman, William Mendenhall, 1974 **Statistics** Ott, Mendenhall, 1983-01-01 **STATISTICS**, 2026 Basic Statistics for Social Research Robert A. Hanneman, Augustine J. Kposowa, Mark D. Riddle, 2012-11-15 A core statistics text

that emphasizes logical inquiry not math Basic Statistics for Social Research teaches core general statistical concepts and methods that all social science majors must master to understand and do social research Its use of mathematics and theory are deliberately limited as the authors focus on the use of concepts and tools of statistics in the analysis of social science data rather than on the mathematical and computational aspects Research questions and applications are taken from a wide variety of subfields in sociology and each chapter is organized around one or more general ideas that are explained at its beginning and then applied in increasing detail in the body of the text Each chapter contains instructive features to aid students in understanding and mastering the various statistical approaches presented in the book including Learning objectives Check quizzes after many sections and an answer key at the end of the chapter Summary Key terms End of chapter exercises SPSS exercises in select chapters Ancillary materials for both the student and the instructor are available and include a test bank for instructors and downloadable video tutorials for students **Je-Statistics** Joseph F.

**Research Skill Development in Social Sciences, Communication and Management** Dr. B.S. Nagi, Dr. (Prof.) A.M. Khan, 2021-07-03 In a series of 100 mini workshops on proposal development during one month training of senior professionals on research methodology orientation and refresher training of faculty from universities and colleges and analysis of data of more than 5000 Ph D scholars and national level projects by the authors of this book several pitfalls emerged in the selection of research area and topic title of a study objectives hypothesis formulation research design development of research tools and analysis of data The errors committed at planning stage of research continue throughout the research work and get its serious reflection in the quality of research During the training the presentation of Research Proposals developed as part of individual and group assignments reinforced the faith of authors that the skills required for quality research are missing in the system And it cannot be fully overcome through the tutorial methodology The knowledge about the research process is crucial but not sufficient to enrich the research skills for quality research It was realized that most of the books do not explain how to decide the research area and title of a study How to set the objectives and how to establish relationship between two These two features not independent constructs and should be mirror of each other How to ensure the quality in the review of literature How should it be carried out How to find research gaps and how to set research questions to be answered in the research studies How to formulate correct hypothesis decide the research design and develop research tools How and from where to pick up variables for developing the research tools How much crystallization of each objective helps researchers to get items for developing the tools such as questionnaire interview schedule check list for observation and measurement scale for attitude perception belief etc about the phenomenon under exploration What type of statistical tools are used for data analysis In depth understanding of these sub steps under each stage of research looks to be bigger area of confusion for researchers The book on Research Skill Development in Social Sciences Communication and Management has been written in the self guide form to answer the issues listed above The Practice of Research in Criminology and Criminal Justice Ronet Bachman, Russell K. Schutt, 2007 This text provides a practical guide to qualitative and quantitative social research techniques integrated with issues from criminal justice
