Applied Stochastic Models and Control for Finance and Insurance Charles S. Tapiero, 2012-12-06 Applied Stochastic Models and Control for Finance and Insurance presents at an introductory level some essential stochastic models applied in economics finance and insurance Markov chains random walks stochastic differential equations and other stochastic processes are used throughout the book and systematically applied to economic and financial applications In addition a dynamic programming framework is used to deal with some basic optimization problems The book begins by introducing problems of economics finance and insurance which involve time uncertainty and risk A number of cases are treated in detail spanning risk management volatility memory the time structure of preferences interest rates and yields etc The second and third chapters provide an introduction to stochastic models and their application Stochastic differential equations and stochastic calculus are presented in an intuitive manner and numerous applications and exercises are used to facilitate their understanding and their use in Chapter 3 A number of other processes which are increasingly used in finance and insurance are introduced in Chapter 4 In the fifth chapter ARCH and GARCH models are presented and their application to modeling volatility is emphasized An outline of decision making procedures is presented in Chapter 6 Furthermore we also introduce

the essentials of stochastic dynamic programming and control and provide first steps for the student who seeks to apply these techniques Finally in Chapter 7 numerical techniques and approximations to stochastic processes are examined This book can be used in business economics financial engineering and decision sciences schools for second year Master s students as well as in a number of courses widely given in departments of statistics systems and decision sciences

Stochastic Control in Insurance Hanspeter Schmidli, 2007-11-20 Stochastic control is one of the methods being used to find optimal decision making strategies in fields such as operations research and mathematical finance This book provides a systematic treatment of optimal control methods applied to problems from insurance and investment complete with detailed proofs The theory is discussed and illustrated by way of examples using concrete simple optimisation problems that occur in the actuarial sciences The problems come from non life insurance as well as life and pension insurance and also cover the famous Merton problem from mathematical finance The book is directed towards graduate students and researchers in actuarial science and mathematical finance who want to learn stochastic control within an insurance setting but it will also appeal to applied probabilists interested in the insurance applications and to practitioners who want to learn more about how the method works

Modelling Extremal Events Paul Embrechts, Claudia Klüppelberg, Thomas Mikosch, 2013-01-02 A reader s first impression on leafing through this book is of the large number of graphs and diagrams used to illustrate shapes of distributions and to show real data examples in various ways A closer reading reveals a nice mix of theory and applications with the copious graphical illustrations alluded to Such a mixture is of course dear to the heart of the applied probabilist statistician and should impress even the most ardent theorists MATHEMATICAL REVIEWS *Probability, Finance and Insurance* T. Stochastic Processes with Applications to Finance, Second Edition Masaaki Kijima,2013-04-18 Financial engineering has been proven to be a useful tool for risk management but using the theory in practice requires a thorough understanding of the risks and ethical standards involved Stochastic Processes with Applications to Finance Second Edition presents the mathematical theory of financial engineering using only basic mathematical tools that are easy to understand even for those with little mathematical expertise This second edition covers several important developments in the financial industry New to the Second Edition A chapter on the change of measures and pricing of insurance products Many examples of the change of measure technique including its use in asset pricing theory A section on the use of copulas especially in the pricing of CDOs Two chapters that offer more coverage of interest rate derivatives and credit derivatives Exploring the merge of actuarial science and financial engineering this edition examines how the pricing of insurance products such as equity linked annuities requires knowledge of asset pricing theory since the equity index can be traded in the market The book looks at the development of many probability transforms for pricing insurance risks including the Esscher transform It also describes how the copula model is used to model the joint distribution of underlying assets By presenting significant results in discrete processes and showing how to transfer the results to their continuous counterparts this text imparts an accessible practical understanding of the subject It helps readers not only grasp the theory of financial engineering but also implement the theory in business **Stochastic Methods for Pension Funds** Pierre Devolder,Jacques Janssen,Raimondo Manca,2013-03-04 Quantitative finance has become these last years a extraordinary field of research and interest as well from an academic point of view as for practical applications At the same time pension issue is clearly a major economical and

financial topic for the next decades in the context of the well known longevity risk Surprisingly few books are devoted to application of modern stochastic calculus to pension analysis The aim of this book is to fill this gap and to show how recent methods of stochastic finance can be useful for to the risk management of pension funds Methods of optimal control will be especially developed and applied to fundamental problems such as the optimal asset allocation of the fund or the cost spreading of a pension scheme In these various problems financial as well as demographic risks will be addressed and modelled
