## **Biology HI Paper 1 May 2011:**

Anthropology and Cryptozoology Samantha Hurn, 2016-11-03 Cryptozoology is best understood as the study of animals which in the eyes of Western science are extinct unclassified or unrecognised. In consequence and in part because of its selective methods and lack of epistemological rigour, cryptozoology is often dismissed as a pseudo science. However, there is a growing recognition that social science can benefit from engaging with it, for as social scientists are very well aware, scientific categorisation and explanation represents just one of a myriad of systems used by humans to enable them to classify and make sense of the world around them. In many cultural contexts, myth, folk classification and lived experience challenge the truth expounded by scientists. With a reflexive anthropological approach and drawing on rich empirical and ethnographic studies from around the world, this volume engages with the theoretical and methodological issues raised by reported sightings of unrecognised animals. Bringing into sharp focus the anthropological value and challenges for methodology posed by beliefs about unclassified creatures, *Anthropology and Cryptozoology: Exploring encounters with mysterious creatures* will be of interest to anthropologists, sociologists and geographers working in the fields of research methods, anthrozoology, mythology and folklore, and human-animal interaction. *Pseudomonas Aeruginosa, Biology, Genetics, and Host-pathogen Interactions* Dara W. Frank, 2012-02-02

The opportunistic pathogen *Pseudomonas aeruginosa* offers a rich variety of biologically relevant topics to explore and serves as a model system to understand the interactions of Gram-negative bacteria with human hosts. The organism adapts readily to most environments. It has a large and variable genome with a great deal of metabolic potential. *P. aeruginosa* encodes a variety of regulatory systems to fine-tune gene expression and integrate environmental signals. This organism can infect both plants and animals and produces a plethora of enzymes and factors that can overcome host defenses. Moreover, it has the ability to change between the states of a sedentary colonizer to an invasive and highly motile organism. Clinically, the bacterium is resistant to many antibiotics, making it difficult to treat and impossible to eradicate from the lungs of patients with cystic fibrosis. Intrinsic antibiotic resistance combined with an armamentarium of tissue-degradative enzymes makes it imperative to possess a comprehensive understanding of the biology, genetics and pathogenesis of this organism so that novel therapeutics based on virulence-product neutralization can be designed and implemented. This Research Topics issue will be devoted to updating the current understanding of *P. aeruginosa* systems as they relate to its different lifestyles in different environments. The underlying theme is to provide broad overviews and to integrate protein structure, function and gene regulation as it relates to the biology of this bacterium.
