Human Factors for Civil Flight Deck Design Don

Harris, 2017-03-02 Human error is now the main cause of aircraft accidents. However, in many cases, the pilot simply falls into a trap that has been left for him/her by the poor design of the flight deck. This book addresses the human factors issues pertinent to the design of modern flight decks. Comprising of invited chapters from internationally recognised experts in human factors and flight deck design, contributions span the world of industry, government research establishments and academia. The book brings together the practical experience of professionals across the human factors and flight deck design disciplines to provide a single all-encompassing volume. Divided into two main parts, part one of the book examines the benefits of human engineering flight deck design process, head-down display design, head-up display design, auditory warning systems, flight control systems, control levers and aircraft handling qualities, flight deck automation and human-computer interaction on the flight deck and anthropometrics for flight deck design. Part two is concerned with flight deck evaluation, the human factors evaluation of flight decks, human factors in flight test and the regulatory viewpoint. Of interest to all human factors professionals operating in high technology, high risk dynamic industries as well as those engaged directly in aerospace activities, the book will also be of key importance to engineers with an interest in human factors for flight deck design, academics and third year and post graduate human factors, ergonomics and psychology students.

**Games and Learning Alliance** João Dias, Pedro A. Santos, Remco C. Veltkamp, 2017-11-28 This book constitutes the refereed proceedings of the 6th International Conference on Games and Learning Alliance (GALA 2017) held in Lisbon, Portugal, in December 2017. The 16 revised regular papers presented together with 6 poster papers were carefully reviewed and selected from 45 submissions. The papers cover topics such as games in education and training, games for health and special children, augmented and virtual reality methods and tools for design and development and poster abstracts.

**AIR CRASH INVESTIGATIONS EYE OF THE NEEDLE The Crash of British Airways Flight 38** Hans Griffioen, editor, 2012-11-01 On 28 November 2008, a Boeing 777-300ER operated by British Airways as flight BA38 on its way from Beijing, China to London Heathrow, suffered on approach to Heathrow Airport an in-flight engine rollback. At 720 feet AGL, the right engine ceased responding to autothrottle commands for increased power and instead the power reduced to 1.03 Engine Pressure Ratio (EPR). Seven seconds later, the left engine power reduced to 1.02 EPR. This reduction led to a loss of airspeed and the aircraft touching down some 330 m short of the paved surface of Runway 27L at London Heathrow. The investigation identified that the reduction in thrust was due to restricted fuel flow to both engines. It was determined that the restriction occurred most probably in the Fuel Oil Heat Exchangers. The investigation identified the forming of ice in the fuel system as the probable cause. The aircraft was destroyed but there were no casualties.

Operations and Regulations provides a comprehensive treatment of the performance of modern jet transport airplanes in an operational context. It is a must have reference for aerospace engineering students, applied researchers, and engineers conducting performance related studies and flight operations. *Aviation and Human Factors* Jose Sanchez-Alarcos, 2019-06-19. Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances of winning a jackpot in any of the major lotteries. However, keeping or improving that performance level requires a critical analysis of some events that despite scarce point to structural failures in the learning process. The effect of these failures could increase soon if there is not a clear and right development path. This book tries to identify what is wrong, why there are things to fix, and some human factors principles to keep in aircraft design and operations. Features: Shows through different events how the system learns through technology, practices, and regulations, and the pitfalls of that learning process. Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough. Presents air safety management as a successful process, but at the same time, failures coming from technological and organizational features are shown. Offers ways to improve from the human factors side by getting the right lessons from recent events. **Aviation Business Magazine**, 2009-02. *ICAO Journal*, 2004.
