Speech And Language Disorders:

Specific Speech and Language Disorders in Children Paul Fletcher, 1992 Conference of The Association for All Speech Impaired Children held in Harrogate 26-31 May 1991

Differential Diagnosis and Treatment of Children with Speech Disorder Barbara Dodd, 2013-05-30 Paediatric speech and language therapists are challenged by diminished resources and increasingly complex caseloads. The new edition addresses their concerns. Norms for speech development are given differentiating between the emergence of the ability to produce speech sounds, articulation and typical developmental error patterns, phonology. The incidence of speech disorders is described for one UK service providing crucial information for service management. The efficacy of service provision is evaluated to show that differential diagnosis and treatment is effective for children with disordered speech. Exploration of that data provides implications for prioritising case loads. The relationship between speech and language disorders is examined in the context of clinical decisions about what to target in therapy. New chapters provide detailed intervention programmes for subgroups of speech disorder: delayed development, use of atypical error patterns, inconsistent errors and development verbal dyspraxia. The final section of the book deals with special populations: children with cognitive impairment, hearing and auditory processing difficulties. The needs of clinicians working with bilingual populations are discussed and ways of intervention described. The final chapter examines the relationship between spoken and written disorders of phonology.

Language Disorders in Children and Adults Victoria Joffe, Madeline Cruice, Shula Chiat, 2008-09-15. This book contains contributions from eminent clinicians and researchers in the field of language impairment and crosses the bridge between children and adults. It reflects the developments that have taken place in Speech and Language Therapy over the past 10 years and focuses on issues in SLT that have recently come into ascendancy. These include personal and social consequences of language disability and how to measure these, the evidence base for speech and language therapy interventions, language processing and the interplay between language and cognition and the degree to which impairments in one affect the other. There is a growing concern about the needs of adolescents who have language difficulties, a group who by their age, development and experience straddle the child/adult divide. It extends the themes by looking at future implications and sets out the challenges ahead for the speech and language therapy profession.
