

Smoking Guns

Catherine Z. Elgin

Smoking Guns:

Considered Judgment Catherine Z. Elgin, 1999-02-01 Philosophy long sought to set knowledge on a firm foundation through derivation of indubitable truths by infallible rules. For want of such truths and rules the enterprise foundered. Nevertheless, foundationalism's heirs continue their forbears' quest seeking security against epistemic misfortune while their detractors typically espouse unbridled coherentism or facile relativism. Maintaining that neither stance is tenable, Catherine Elgin devises a via media between the absolute and the arbitrary, reconceiving the nature, goals, and methods of epistemology. In *Considered Judgment* she argues for a reconception that takes reflective equilibrium as the standard of rational acceptability. A system of thought is in reflective equilibrium when its components are reasonable in light of one another and the account they comprise is reasonable in light of our antecedent convictions about the subject it concerns. Many epistemologists now concede that certainty is a chimerical goal. But they continue to accept the traditional conception of epistemology's problematic Elgin suggests that in abandoning the quest for certainty we gain opportunities for a broader epistemological purview one that comprehends the arts and does justice to the sciences. She contends that metaphor, fiction, emotion, and exemplification often advance understanding in science as well as in art. The range of epistemology is broader and more variegated than is usually recognized. Tenable systems of thought are neither absolute nor arbitrary. Although they afford no guarantees, they are good in the way of belief.

The Quality of the Archaeological Record Charles Perreault, 2019-09-16 Paleobiology struggled for decades to influence our understanding of evolution and the history of life because it was stymied by a focus on microevolution and an incredibly patchy fossil record. But in the 1970s the field took a radical turn as paleobiologists began to investigate processes that could only be recognized in the fossil record across larger scales of time and space. That turn led to a new wave of macroevolutionary investigations, novel insights into the evolution of species, and a growing prominence for the field among the biological sciences. In *The Quality of the Archaeological Record* Charles Perreault shows that archaeology not only faces a parallel problem but may also find a model in the rise of paleobiology for a shift in the science and theory of the field. To get there he proposes a more macroscale approach to making sense of the archaeological record, an approach that reveals patterns and processes not visible within the span of a human lifetime but rather across an observation window thousands of years long and thousands of kilometers wide. Just as with the fossil record, the archaeological record has the scope necessary to detect macroscale cultural phenomena because it can provide samples that are large enough to cancel out the noise generated by micro scale events. By recalibrating their research to the quality of the archaeological record and developing a true macroarchaeology program, Perreault argues, archaeologists can finally unleash the full contributive value of their discipline.

Rock, Bone, and Ruin Adrian Currie, 2024-05-21 An argument that we should be optimistic about the capacity of methodologically omnivorous geologists, paleontologists, and archaeologists to uncover truths about the deep past. The historical sciences, geology, paleontology, and

archaeology have made extraordinary progress in advancing our understanding of the deep past. How has this been possible given that the evidence they have to work with offers mere traces of the past? In *Rock, Bone and Ruin* Adrian Currie explains that these scientists are methodological omnivores with a variety of strategies and techniques at their disposal and that this gives us every reason to be optimistic about their capacity to uncover truths about prehistory. Creative and opportunistic paleontologists for example discovered and described a new species of prehistoric duck-billed platypus from a single fossilized tooth. Examining the complex reasoning processes of historical science Currie also considers philosophical and scientific reflection on the relationship between past and present the nature of evidence, contingency and scientific progress. Currie draws on varied examples from across the historical sciences from Mayan ritual sacrifice to giant Mesozoic fleas to Mars's mysterious watery past to develop an account of the nature of and resources available to historical science. He presents two major case studies the emerging explanation of sauropod size and the snowball earth hypothesis that accounts for signs of glaciation in Neoproterozoic tropics. He develops the Ripple Model of Evidence to analyze unlucky circumstances in scientific investigation examines and refutes arguments for pessimism about the capacity of the historical sciences defending the role of analogy and arguing that simulations have an experiment-like function. Currie argues for a creative open-ended approach empirically grounded speculation.

The Mystery of the Smoking Gun Carroll John Daly, 1936 **The Nation**, 2005 **The Polytechnic** Rensselaer Polytechnic Institute, 1890 **Poems** Whittier, 1878 *Men, Ships, and the Sea* Alan Villiers, National Geographic Society (U.S.), 1962 A well-illustrated book tracing the development of ships and historic battles fought at sea. *Smoking* James D. Torr, Greenhaven Press, 2001 Explores the severity of the problem of smoking discusses whether the tobacco industry is responsible for the health consequences of smoking and examines whether the government should increase efforts to reduce smoking. *On Wheels and how I Came There* William B.
