## **The Planets Exploring The Solar System:**

*Exploring the Solar System* Peter Bond, 2012-02-29 The exploration of our solar system is one of humanity's greatest scientific achievements. The last fifty years in particular have seen huge steps forward in our understanding of the planets, the sun and other objects in the solar system. Whilst planetary science is now a mature discipline involving geoscientists, astronomers, physicists and others, many profound mysteries remain and there is indeed still the tantalizing possibility that we may find evidence of life on another planet in our system. Drawing upon the latest results from the second golden age of Solar System exploration, author Peter Bond provides an authoritative and up-to-date account of the planets, satellites and smaller debris that orbit the Sun. Written in an informal style with minimal use of mathematics, this book is the ideal introductory text for non-science students and other readers with little or no science background. With the aid of numerous illustrations, many in full colour, this exciting book brings to life the weird and wonderful worlds that populate our corner of the Universe. This book assumes no background in physics, astronomy or mathematics. Carefully explains key concepts. Gives balanced coverage to areas of controversy or uncertainty in planetary science. Is in full color throughout and richly illustrated. An interview with Peter can be found at <http://wisciblog.com>. 2012-02-28 exploring the solar system *The Planets* Roy A. Gallant, 1990 Discusses the planets, moons, sun, asteroids, meteoroids and comets of the solar system, their features and movements, and man's exploration of them. **Exploring the Solar System** Mary Kay Carson, 2008-02-01 In this stellar activity book, kids delve into the rich history of space exploration where telescopes, satellites, probes, landers and human missions lead to amazing discoveries. Updated to include the recent discovery of Eris, which along with Pluto has been newly classified as a dwarf planet by the International Astronomical Union, this cosmic adventure challenges kids to explore the planets and other celestial bodies for themselves through activities such as building a model of a comet using soil, molasses, dry ice and window cleaner or creating their own reentry vehicle to safely return an egg to Earth's surface. With biographies of more than 20 space pioneers, specific mission details, a 20-page field guide to the solar system and plenty of suggestions for further research, this is the ultimate guidebook to exploring the solar system. [Planetary Exploration Horizon 2061](#) Michel Blanc, 2022-10-28 *Planetary Exploration Horizon 2061* A Long Term Perspective for Planetary Exploration synthesizes all the material elaborated and discussed during three workshops devoted to the Horizon 2061 foresight exercise. Sections cover the science of planetary systems, space missions to solar system objects, technologies for exploration and infrastructures and services to support the missions and to maximize their science return. The editors follow the path of the implementation of a planetary mission from the needed support in terms of navigation and communication through the handling of samples returned to Earth to the development of more permanent infrastructures for scientific human outposts on the Moon and Mars. This book also includes a special chapter entirely devoted to contributions from students and early career scientists, the Horizon 2061 generation, and a final chapter on important avenues for the actual implementation of the planetary missions.

coming out of our Dreams for Horizon 2061 International cooperation and the growing role and initiatives of private enterprise in planetary exploration Provides a logical link between scientific questions and the technologies needed to thoroughly address them Organized chapters present a logical road map of subjects while also stimulating a cross disciplinary understanding of the scientific and technical challenges of planetary exploration Contains illustrations and tables that capture and synthesize knowledge of a broad readership      *Exploring the Planets* Eric H.
