European Conference on Object-Oriented Programming** Jean Bezivin, Jean-Marie Hullot, Pierre Cointe, Henry Lieberman, 1987 This volume contains the proceedings of the first European Conference on Object Oriented Programming held in Paris June 15 17 1987 The idea of this annual conference series is to provide a forum for theorists and practitioners interested in the object oriented programming paradigm The contributions cover the following aspects of object oriented programming methodology implementation theory interfaces languages simulation inheritance Intelligent Systems for Engineering Ram D. Sriram, 2012-12-06 When men of knowledge impart this knowledge I do not mean they will convince your reason I mean they will awaken in you the faith that it is so Sri Krishna Bhagavadgita BACKGROUND The use of computers has led to significant productivity increases in the engineering industry Most of the computer aided engineering applications were restricted to algorithmic computations such as finite element programs and circuit analysis programs However a number of problems encountered in engineering are not amenable to purely algorithmic solutions These problems are often ill structured the term ill structured problems is used here to denote problems that do not have a clearly defined algorithmic solution An

experienced engineer deals with these ill structured problems using his/her judgment and experience. The knowledge based systems (KBS) technology which emerged out of research in artificial intelligence (AI) offers a methodology to solve these ill structured engineering problems. The emergence of the KBS technology can be viewed as the knowledge revolution. Other important events that led to increased productivity are the industrial revolution 17th century, the invention of the transistor and associated developments first half of the 20th century and the world wide web towards the end of the 20th century. Kurzweil in a lecture at MIT on December 3 1987 linked the progress of automation to two industrial revolutions: the first industrial revolution leveraged our physical capabilities whereas the second industrial revolution the knowledge revolution is expected to leverage our mental capabilities.

Handbook of Object Technology Saba

Zamir, 1998-12-18 The object oriented paradigm has become one of the dominant forces in the computing world. According to a recent survey by the year 2000 more than 80% of development organizations are expected to use object technology as the basis for their distributed development strategies. Handbook of Object Technology encompasses the entire spectrum of disciplines and topics related to this rapidly expanding field, outlining emerging technologies, latest advances, current trends, new specifications and ongoing research. The handbook divides into 13 sections, each containing chapters related to that specific discipline. Up to date, non abstract information provides the reader with practical, useful knowledge directly applicable to the understanding and improvement of the reader's job or the area of interest related to this technology. Handbook of Object Technology discusses the processes, notation and tools for classical OO methodologies as well as information on future methodologies prevalent and emerging OO languages, standards and specifications, frameworks and patterns, databases, metrics, business objects, intranets, analysis, design tools, client server application development environments.

ECOOP '95, Object-oriented Programming Walter Olthoff, 1995 This book presents the carefully refereed proceedings of the 9th European Conference on Object Oriented Programming (ECOOP 95) held in Aarhus, Denmark in August 1995. Besides the scientific conference documented in this book, ECOOP 95 included a number of tutorials and workshops as well as a two day technology exhibition and thus reflects the full spectrum of Object Oriented Programming. The volume presents three invited contributions and 18 full research papers selected from more than 90 submissions. The papers are organized in sections on types, programming languages, reflective programming and verification, implementation, concurrency and specification and distribution and interfaces.
