Security and

Privacy in Smart Grid Asmaa Abdallah, Xuemin Shen, 2018-07-26 This SpringerBrief addresses the main security concerns for smart grid e g the privacy of electricity consumers the exchanged messages integrity and confidentiality the authenticity of participated parties and the false data injection attacks Moreover the authors demonstrate in detail the various proposed techniques to secure the smart grid s different communication networks and preserve the privacy of the involved Over many years power grid has generated electricity from central generators and distributed it in one direction from the generation stations to end users also information is one directional so that the grid s control center doesn t get enough information about customers requirements and consequently can t prevent electricity losses So the electricity grid is merged with

information and communication technology to form smart grid. The main target of this incorporation is to connect different parties of power grid to exchange information about grid conditions and customers requirements and consequently improve the reliability and efficiency of electricity generation and distribution. That upgrade of the power grid exposes it to the cyber security threats that the communication networks suffer from such as malicious attacks to forge the electricity consumption readings or price extract personal information for residential consumers such as daily habits and life style or attack some grid's resources and equipment availability using denial of service attacks. Also novel threats are introduced in smart grid due to the power grid nature such as false data injection attack in which the adversary compromises several measurement units and injects false information about the grid conditions that mislead the grid's control center to make wrong decisions for the grid and consequently impact on its stability and efficiency.

Smart Grid Research Development and Demonstration Assessment, California Igor Paprotny, Sean Wihera, Louw Smith, University of California, Berkeley, University of California (System). Regents, 2013 *Transforming the European Energy System* Leonard Coen, Jean-Luc Frast, 2016-09-13 Master's Thesis from the year 2012 in the subject Politics Environmental Policy grade 1.0 University of Copenhagen course International Law Economics language English abstract The European Union aspires to be a frontrunner in the transition towards a low carbon economy. Its energy policy aims at reconciling climate and

environmental objectives with concerns over security of supply and competitive markets The restructuring and modernisation of the European energy system is driven by a continuous liberalisation regime in conjunction with the promotion of renewable energy sources and energy efficiency The implications of this strategy are manifold whereof the modernisation and upgrade of the electricity grid is increasingly recognized to be the quintessential prerequisite to meet tomorrow s energy challenges The emergence of the Smart Grid has enthused industry and policy makers alike as it has the potential to be the enabler for a future low carbon electricity system by facilitating demand side efficiency increasing the shares of renewables and distributed energy generation and enabling electrification of transport The European Commission views the Smart Grid as the backbone of Europe s future energy infrastructure advancing the development of green energy while making the system more stable through information and communication technologies The deployment of Smart Grid implies a technological transformation that will have a deep impact on the whole electricity value chain The thesis explores the effects of this transition process with regard to energy market liberalisation Smart Grid deployment and energy market integration We scrutinize the relationship of these three variables by considering Smart Grids as a function of liberalisation liberalisation as a function of Smart Grid deployment and last but not least market integration as a function of liberalisation and Smart Grid deployment
