Snake Alarm:

The Red Colobus Monkeys Thomas T. Struhsaker, 2010-04-01 Based on field studies spanning nearly 40 years this reference book summarizes and integrates past research with new and previously unpublished information on the behavioral ecology of Africa's red colobus monkeys from study sites as diverse as Senegal, Uganda and Zanzibar. It provides an unparalleled compilation of information on taxonomy, genetics, vocalizations, demography, social organization, dispersal, social behavior, reproduction, mortality factors, diet, ranging patterns, interspecific relations, and conservation. Social relationships in red colobus are less rigidly structured than in other African monkeys, resulting in considerable variation in social organization and group composition both within and between taxa. This provides a unique opportunity to examine the extent to which social variables correlate with differences in habitat quality, demography, and predation by chimpanzees and humans. Unfortunately, at least half of the 18 taxa of red colobus are now threatened with extinction. Conservation problems are described, causal factors identified, and solutions proposed. This volume is intended not only to serve as a reference book but to stimulate and guide future long-term research and to encourage effective conservation action. How Monkeys See the World Dorothy L. Cheney, Robert M. Seyfarth, 2024-05-31 Cheney and Seyfarth enter the minds of vervet monkeys and other primates to explore the nature of primate intelligence and the evolution of cognition. This reviewer had to be restrained from stopping people in the street to urge them to read it. They would learn something of the way science is done, something about how monkeys see their world and something about themselves, the mental models they inhabit. Roger Lewin, Washington Post Book World. A fascinating intellectual odyssey and a superb summary of where science stands. Geoffrey Cowley, Newsweek. A once in the history of science enterprise. Duane M. Rumbaugh, Quarterly Review of Biology. **The Science of Learning** Joseph Pearl, 2001. Written in a direct, easy-to-read style that is suitable for undergraduates. The Science of Learning provides a comprehensive and systematic introduction to the field. Although aimed at the undergraduate level, its comprehensive coverage makes it an ideal reference for more advanced scholars and specialists in learning-related fields. Major topics covered include the evolution of learning, sensitization, habituation, operant and classical conditioning, imitation, stimulus and response generalization, and discrimination, conditional discrimination, memory, motivation, adjunctive behavior, and aversive control. Numerous examples, applications, and illustrations are provided. Adding to its value as a reference as well as a text are appendices highlighting important mathematical developments and their derivations. Readers of the text will be exceptionally well positioned to follow the literature and comprehend the most recent developments in the field. **Intelligence in Animals** Michael Bright, 1994
