The Indian Space Programme Gurbir Singh, 2017-10-17 Fifty years in the making India's Space Programme is fulfilling the vision of its founders and delivering services from space that touch the lives of 1.3 billion people every day. In addition to operating a collection of satellites for weather, Earth observation, navigation and communication, today India has a spacecraft orbiting Mars and a space telescope in Earth orbit. This book provides the big picture of India's long association with science from historical figures like Aryabhata and Bhaskara to Homi Bhabha and Vikram Sarabhai, the key architects of its space program. It covers the scientific contribution of Indian scientists during the European Enlightenment and industrial revolution. It traces the technological development of Tipu Sultan's use of rockets for war in the 1780s, the all but forgotten contribution of Stephen H. Smith's use of rockets as a means of transport in 1935 in northern India, and the emergence of Sriharikota, India's spaceport, the heart of India's modern Space Programme. A detailed account of how a fishing village in Kerala was transformed into a space centre and used to launch India's first rocket into space on 21 November 1963. A detailed summary of India's space infrastructure, launch vehicles, deep space network, Telemetry, Tracking and Command, and space assets in orbit. Description of how the ordinary people of India benefit from the services delivered by the space programme. Why India chose to go to the Moon and Mars and how it got there. The prospects for India's ambitions in space for human spaceflight, national security and scientific exploration. An analysis of how India's Space Programme may play out on the global stage. Will it compete or collaborate with China, USA and Russia in space. This detailed work in 645 pages, 29 tables and 9 appendices is richly illustrated with 140 illustrations, some images published for the first time, and supported by over 1,000 references. It is written for the non-specialist, offering a big picture view.

S N Bose Santimay Chatterjee, 1994 Emerging Physics Joshi, 2009 This book is designed as per the new Curriculum conceived for the students of B.Sc. Physics. Although the approach is primarily qualitative, a reasonably large number of illustrative examples and segregated exercises are included wherever possible to ensure that the students develop a taste of real rigour of physics.

The Making of Modern Physics in Colonial India Somaditya Banerjee, 2020-05-14 This monograph offers a cultural history of the development of physics in India during the first half of the twentieth century, focusing on Indian physicists: Satyendranath Bose (1894-1974), Chandrasekhara Venkata Raman (1888-1970) and Meghnad Saha (1893-1956). The analytical category 'Bhadralok' physics is introduced to explore how it became possible for a highly successful brand of modern science to develop in a country that was still under colonial domination. The term 'Bhadralok' refers to the then emerging group of native intelligentsia who were identified by academic pursuits and manners. Exploring the forms of life of this social group allows a better understanding of the specific character of Indian modernity that, as exemplified by the work of 'Bhadralok' physicists, combined modern science with indigenous knowledge in an original program of scientific research. The three scientists achieved the most significant scientific successes

in the new revolutionary field of quantum physics with such internationally recognized accomplishments as the Saha ionization equation 1921 the famous Bose Einstein statistics 1924 and the Raman Effect 1928 the latter discovery having led to the first ever Nobel Prize awarded to a scientist from Asia This book analyzes the responses by Indian scientists to the radical concept of the light quantum and their further development of this approach outside the purview of European authorities The outlook of bhadralok physicists is characterized here as cosmopolitan nationalism which allows us to analyze how the group pursued modern science in conjunction with and as an instrument of Indian national liberation *Year Book of the Asiatic Society* Asiatic Society (Kolkata, India),1958

Gateway to Condensed Matter Physics and Molecular Biophysics Ranjan Chaudhury,2021-12-22 This new volume provides the necessary background material and brings into focus the fundamental concepts essential for advanced research in theoretical condensed matter physics and its interface with molecular biophysics It is the outcome of the author s long teaching and research career in theoretical condensed matter physics and related interdisciplinary fields The author aims to motivate students to take up research in condensed matter physics and march toward new frontiers He writes My long understanding of students attitude and orientation brings me to the conclusion that many of them are quite excited about the developments in the frontier research areas at the beginning of their career however a sizeable fraction of them start losing interest gradually as they are often unable to connect these developments with the basic physics they have studied I have tried to fill this gap in this book To this end special care has been taken to balance the physical concepts and mathematical expressions as well as proper mixing of theoretical and experimental aspects He starts with the very well known elementary ideas or basic concepts and goes forward so as to remove the apparent conceptual and technical gap between the known laws and various interesting challenging and novel experimental results and effects some of which are amongst the latest discoveries Key features Introduces a new way of looking at various important and fundamental phenomena in condensed matter from the perspective of microscopic theory Explores a new interface of quantum condensed matter physics and molecular biophysics highlighting research potentialities Addresses the crucial questions surrounding these phenomena when they are mutually coexisting or competing in real condensed matter systems or materials from both theoretical and experimental angles Deals with biological molecules and some of their properties and processes and discusses the modeling of these with the help of condensed matter physics and statistical physics Emphasizes fundamental concepts particularly in condensed matter physics and making proper use of them Bulletin of the Ramakrishna Mission Institute of Culture Ramakrishna Mission.
