Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be
acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A
reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic
orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words
with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws
on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are
not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a
full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only
the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may
necessitate more complete representations or more conscious access to them The learning processes that children use to
acquire such cognitive systems in the brain and whether these same processes are universal across different languages and
orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus
the coordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching
approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and
teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in
neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize
and review what has been accomplished so far and to further explore these general issues Contributions from different
perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of
literacy including cross orthographic research **Philippine Journal of Psychology**, 1999 **October 2019 Monthly**
