**Computer Science and Computing** Michael Knee,2006 Publishers description Michael Knee offers a selective guide to the major resources and tools central to the computer industry A discussion of three commonly used subject classification systems precedes an annotated bibliography of over 500 items      *Impact of Advances in Computing and Communications Technologies on Chemical Science and Technology* National Research Council,Division on Engineering and Physical Sciences,Commission on Physical Sciences, Mathematics, and Applications,Chemical Sciences Roundtable,1999-08-31 The Chemical Sciences Roundtable provides a forum for discussing chemically related issues affecting government industry and government The goal is to strengthen the chemical sciences by foster communication among all the important stakeholders At a recent Roundtable meeting information technology was identified as an issue of increasing importance to all sectors of the chemical enterprise This book is the result of a workshop convened to explore this topic      **Computer Chemistry** Ivar Ugi,2014-03-12

**The Second Age of Computer Science** Subrata Dasgupta,2018-05-01 By the end of the 1960s a new discipline named computer science had come into being A new scientific paradigm the computational paradigm was in place suggesting that computer science had reached a certain level of maturity Yet as a science it was still precociously young New forces some technological some socio economic some cognitive impinged upon it the outcome of which was that new kinds of computational problems arose over the next two decades Indeed by the beginning of the 1990 s the structure of the computational paradigm looked markedly different in many important respects from how it was at the end of the 1960s Author Subrata Dasgupta named the two decades from 1970 to 1990 as the second age of computer science to distinguish it from the preceding genesis of the science and the age of the Internet World Wide Web that followed This book describes the evolution of computer science in this second age in the form of seven overlapping intermingling parallel histories that unfold

concurrently in the course of the two decades Certain themes characteristic of this second age thread through this narrative the desire for a genuine science of computing the realization that computing is as much a human experience as it is a technological one the search for a unified theory of intelligence spanning machines and mind the desire to liberate the computational mind from the shackles of sequentiality and most ambitiously a quest to subvert the very core of the computational paradigm itself We see how the computer scientists of the second age address these desires and challenges in what manner they succeed or fail and how along the way the shape of computational paradigm was altered And to complete this history the author asks and seeks to answer the question of how computer science shows evidence of progress over the course of its second age
