## **The Computer Revolution An Economic Perspective:**

The Computer Revolution Daniel E. Sichel, 2001-08-09 During the 1980s and into this decade U S businesses poured billions of dollars into computers and other information technology Yet the productivity performance of the U S economy in the 1980s remained lackluster especially in the service sector leading many observers to suspect that companies were not getting their money's worth from these high tech investments At the same time academic research found little evidence of a productivity payoff But have the tables now turned With an apparent improvement in productivity in recent years much academic and popular opinion now suggests that the payback is at hand or just around the corner As the nation embarks on a major effort to develop an Information Superhighway it is critical for policymakers opinion leaders and others to understand the contribution and role of information technology in the economy during recent decades This book provides a straightforward guide to the economic issues underlying the debates about these issues using quantitative and historical analysis supplemented with interviews of small and large service sector companies To set the stage Daniel Sichel reviews the debates over the role of computers and summarizes the essential facts about computer use with a particular emphasis on software Going beyond basic facts Sichel describes an economic framework for assessing the aggregate economic impact of computers in recent decades and for looking ahead at this impact in the future Quantitative estimates from this framework along with supporting historical and interview evidence place limits on the contribution of computers to the overall economy When compared to the size of the slowdown in productivity growth in the early 1970s the overall impact of computers appears relatively modest in part because the share of computers in the nation's capital stock is surprisingly small Looking ahead Sichel also raises questions as to whether computers are likely to solve the nation's productivity woes in the future

Perspectives on the Computer Revolution Zenon W. Pylyshyn, 1970 This text is designed to introduce students to the historical intellectual and social context of computers and their development The Computer Revolution Daniel E. The Comedy of Computation Benjamin Mangrum, 2025-07-29 In this cultural history of the computer Benjamin Mangrum shows that comedy has been central to how we ve made sense of the technology s sweeping effects on public life and private experience From the first Broadway play to include a computer in the

1950s to popular films like You've Got Mail and joke telling digital assistants Mangrum assembles an extensive archive of work by writers filmmakers programmers engineers and other technologists who have coupled comedy with computation. Many have used comedy to make the computer seem ordinary. Others have tried to stage the assimilation of computers within corporate life as a kind of comic drama. Mangrum describes these and many other ways in which comedy and computation have come together as a new genre of experience the comedy of computation. The modern world exalts advances in technology but we are constantly haunted by the specter of falling behind and becoming obsolete. Mangrum examines how comedy serves as a stage for working out these conflicted modes of experience in writing by Dave Eggers Curtis Sittenfeld Ishmael Reed and Kurt Vonnegut Jr among others arguing that when we look at the comic forms that shape the cultures of computing we come to better understand the tensions and contradictions internal to the social world we inhabit.

**Technology, Values, and Society** Mitra Das, Shirley Kolack, 2008. Technology is not value free nor does it exist in a vacuum. It needs a social basis technology is affected by society and influences it. Technology Values and Society illustrates this using an examination of cross cultural case studies representing simple intermediate and complex societies. Certain forms of technology exist when conducive values and structures sustain them. However this relationship is not one way. Technological changes do precipitate social and value changes. It is impossible to sustain egalitarian values in a society involving technology based on hierarchical relationships. Understanding this connection is vital if we are to keep some control over the way in which technology affects us. This revised edition brings the topic to life for both faculty and students.

Technology and Economic Performance in the American Economy Robert James Gordon, 2002. This paper examines the sources of the U.S. macroeconomic miracle of 1995-2000 and attempts to distinguish among permanent sources of American leadership in high technology industries as contrasted with the particular post 1995 episode of technological acceleration and with other independent sources of the economic miracle unrelated to technology. The core of the American achievement was the maintenance of low inflation in the presence of a decline in the unemployment rate to the lowest level reached in three decades. The post 1995 technological acceleration particularly in information technology (IT) and accompanying revival of productivity growth directly contributed both to faster output growth and to holding down the inflation rate but inflation was also held down by a substantial decline in real non oil import prices by low energy prices through early 1999 and by a temporary cessation in 1996-98 of inflation in real medical care prices. In turn low inflation allowed the Fed to maintain an easy monetary policy that fueled rapid growth in real demand profits and stock prices which fed back into growth of consumption in excess of growth in income. The technological acceleration was made possible in part by permanent sources of American advantage over Europe and Japan most notably the mixed system of government and privately funded research universities the large role of U.S. government agencies providing research funding based on peer review the strong tradition of patent and securities regulation the leading worldwide position of U.S. business schools and U.S. owned investment

banking accounting and management consulting firms and the particular importance of the capital market for high tech financing led by a uniquely dynamic venture capital industry While these advantages help to explain why the IT boom happened in the United States they did not prevent the U S from experiencing a dismal period of slow productivity growth between 1972 and 1995 nor from falling behind in numerous industries outside the IT sector The 1995 2000 productivity growth revival was fragile both because a portion rested on unsustainably rapid output growth in 1999 2000 in the growth rate of computer investment after 1995 that could not continue forever The web could only be invented once Y2K artificially compressed the computer replacement cycle and some IT purchases were made by dot coms that by early 2001 were bankrupt As an invention the web provided abundant consumer surplus but no recipe for most dot coms to make a profit from providing free services High

**Does the "new Economy" Measure Up to**

**the Great Inventions of the Past?** Robert J. Gordon, 2000 During the four years 1995 99 U S productivity growth experienced a strong revival and achieved growth rates exceeding that of the golden age of 1913 72 Accordingly many observers have declared the New Economy the Internet and the accompanying acceleration of technical change in computers and telecommunications to be an Industrial Revolution equal in importance or even more important than the Second Industrial Revolution of 1860 1900 which gave us electricity motor and air transport motion pictures radio indoor plumbing and made the golden age of productivity growth possible This paper raises doubts about the validity of this comparison with the Great Inventions of the past It dissects the recent productivity revival and separates the revival of 1 35 percentage points comparing 1995 99 with 1972 95 into 0 54 of an unsustainable cyclical effect and 0 81 points of acceleration in trend growth The entire trend acceleration is attributed to faster multi factor productivity MFP growth in the durable manufacturing sector consisting of computers peripherals telecommunications and other types of durables There is no revival of productivity growth in the 88 percent of the private economy lying outside of durables in fact when the contribution of massive investment in computers in the nondurable economy is subtracted MFP growth outside of durables has actually decelerated The paper combines the Great Inventions of 1860 1900 into five clusters and shows how their development and diffusion in the first half of the 20th century created a fundamental transformation in the American standard of living from the bad old days of the late 19th century In comparison computers and the Internet fall short The rapid decline in the cost of computer power means that the marginal utility of computer characteristics like speed and memory has fallen rapidly as well implying that the greatest contributions of computers lie in the past not in the future The Internet fails the hurdle test as a Great Invention on several counts First the invention of the Internet has not boosted the growth in the demand for computers all of

that growth can be interpreted simply as the same unit elastic response to the decline in computer prices as was prevalent prior to 1995 Second the Internet provides information and entertainment more cheaply and conveniently than before but much of its use involves substitution of existing activities from one medium to another Third much internet investment involves defense of market share by existing companies like Borders Books faced with the rise of Amazon social returns are less than private returns Fourth much Internet activity duplicates existing activity like mail order catalogues but the latter have not faded away the usage of paper is rising not falling Finally much Internet activity like daytime e trading involves an increase in the fraction of work time involving consumption on the job
