The Conformal Structure Of Space Time Geometry Analysis Numerics:

The Conformal Structure of Space-Times Jörg Frauendiener, Helmut Friedrich, 2014-03-12 Causal relations and with them the underlying null cone or conformal structure form a basic ingredient in all general analytical studies of asymptotically flat space time The present book reviews these aspects from the analytical geometrical and numerical points of view Care has been taken to present the material in a way that will also be accessible to postgraduate students and nonspecialist reseachers from related fields *The Conformal Structure of Space-Times* Jörg Frauendiener, Helmut Friedrich, 2002-12-10 Causal relations and with them the underlying null cone or conformal structure form a basic ingredient in all general analytical studies of asymptotically flat space time The present book reviews these aspects from the analytical geometrical and numerical points of view Care has been taken to present the material in a way that will also be accessible to postgraduate students and nonspecialist reseachers from related fields *The Einstein Equations and the Large Scale Behavior of Gravitational Fields* Piotr T. Chrusciel, Helmut Friedrich, 2012-12-06 The book presents state of the art results on the analysis of the Einstein equations and the large scale structure of their solutions It combines in a unique way introductory chapters and surveys of various aspects of the analysis of the Einstein equations in the large It discusses applications of the Einstein equations in geometrical studies and the physical interpretation of their solutions Open problems concerning analytical and numerical aspects of the Einstein equations are pointed out Background material on techniques in PDE theory differential geometry and causal theory is provided **Relativity and Gravitation** Jiří Bičák, Tomáš Ledvinka, 2014-06-06 In early April 1911 Albert Einstein arrived in Prague to become full professor of theoretical physics at the German part of Charles University It was there for the first time that he concentrated primarily on the problem of gravitation Before he left Prague in July 1912 he had submitted the paper *Relativit t und Gravitation Erwiderung auf eine Bemerkung von M Abraham* in which he remarkably anticipated what a future theory of gravity should look like At the occasion of the Einstein in Prague centenary an international meeting was organized under a title inspired by Einstein s last paper from the Prague period *Relativity and Gravitation 100 Years after Einstein in Prague* The main topics of the conference included classical relativity numerical relativity relativistic astrophysics and cosmology quantum gravity experimental aspects of gravitation and conceptual and historical issues The conference attracted over 200 scientists from 31 countries among them a number of leading experts in the field of general relativity and its applications This volume includes abstracts of the plenary talks and full texts of contributed talks and articles based on the posters presented at the conference These describe primarily original results of the authors Full texts of the plenary talks are included in the volume *General Relativity Cosmology and Astrophysics Perspectives 100 Years after Einstein in Prague* eds J Bi k and T Ledvinka published also by Springer Verlag *Beyond Einstein* David E. Rowe, Tilman Sauer, Scott A. Walter, 2018-06-18 *Beyond Einstein Perspectives on Geometry Gravitation and Cosmology* explores the rich interplay between mathematical and physical ideas by studying the

interactions of major actors and the roles of important research communities over the course of the last century

Accelerating Expansion Gordon Belot, 2023-08-24 Accelerating Expansion explores some of the philosophical implications of modern cosmology focused on the significance that the discovery of the accelerating expansion of the Universe has for our understanding of time geometry and physics The appearance of the cosmological constant in the equations of general relativity allows one to model universes in which space has an inherent tendency towards expansion This constant introduced by Einstein but subsequently abandoned by him returned to centre stage with the discovery of the accelerating expansion This pedagogically oriented essay begins with a study of the most basic and elegant relativistic world that involves a positive cosmological constant de Sitter spacetime It then turns to the relatives of de Sitter spacetime that dominate modern relativistic cosmology Some of the topics considered include the nature of time and simultaneity in de Sitter worlds the sense in which de Sitter spacetime is a powerful dynamical attractor the limited extent to which observation can give us information about the topology of space in a world undergoing accelerated expansion and cosmologists favourite sceptical worry about the reliability of evidence and the possibility of knowledge the problem of Boltzmann brains **Index of**
