Computer-Integrated Engineering Design and Manufacture Wilson R Nyemba, 2025-10-21 This book presents advanced concepts of computer aided design and computer aided manufacture through modelling and computer numerical control coupled with the simulation of production systems. It dwells on the subtle and key features such as the applications and effective use of dynamic blocks in modelling subtractive and additive layer manufacturing, flexible manufacturing systems and automation and robotics. The text discusses the principles of computer aided design in a comprehensive manner and applications of the AutoCAD interface programming language. Covers aspects of product development and design together with accompanying principles of design for manufacture and assembly. Explains the integrated approach to design and manufacture enhanced by modelling, simulation and analysis software with capabilities for electronic transfer and interchange between the software packages. Presents process planning and part programming with MasterCAM generating toolpaths and selecting machine tools for subtractive manufacturing and step by step worked examples to enhance the understanding of principles and concepts of engineering design and manufacture. Explores sequential control and logical sequencing configuration of industrial robots and challenges in programming robots. The integrated nature of this book and the examples therein are intended for senior undergraduates, graduate students, academic researchers and practising engineers in various fields of engineering such as but not limited to aeronautical, civil, electrical, industrial, manufacturing, mechanical, mechatronics and production engineering.

Ballhaus (Jr.), Juanita Frick, 1977 This appendix volume contains the program listing and flowchart for the program described in Volume I and Volume II. The program is a numerical method that predicts the detailed pressure distribution on wing body combinations at transonic Mach numbers less than one and integrates the pressures to obtain aircraft force and moment data. The code has been developed with the intent of providing the user with an easy to use and reliable tool. The basic inviscid prediction method is the modified transonic small disturbance theory program. In order to provide accurate surface pressure predictions on the wing several additional features of the typical transonic flowfield have been incorporated. These consist of the viscous displacement effect
