*Expert Political Judgment* Philip E. Tetlock, 2017-08-29 Since its original publication *Expert Political Judgment* by New York Times bestselling author Philip Tetlock has established itself as a contemporary classic in the literature on evaluating expert opinion Tetlock first discusses arguments about whether the world is too complex for people to find the tools to understand political phenomena let alone predict the future He evaluates predictions from experts in different fields comparing them to predictions by well informed laity or those based on simple extrapolation from current trends He goes on to analyze which styles of thinking are more successful in forecasting Classifying thinking styles using Isaiah Berlin's prototypes of the fox and the hedgehog Tetlock contends that the fox the thinker who knows many little things draws from an eclectic array of traditions and is better able to improvise in response to changing events is more successful in predicting the future than the hedgehog who knows one big thing toils devotedly within one tradition and imposes formulaic solutions on ill defined problems He notes a perversely inverse relationship between the best scientific indicators of good judgement and the qualities that the media most prizes in pundits the single minded determination required to prevail in ideological combat Clearly written and impeccably researched the book fills a huge void in the literature on evaluating expert opinion It will appeal across many academic disciplines as well as to corporations seeking to develop standards for judging expert decision making Now with a new preface in which Tetlock discusses the latest research in the field the book explores what constitutes good judgment in predicting future events and looks at why experts are often wrong in their forecasts *Super Crunchers* Ian Ayres, 2008-05-01 Companies used to rely on human experts and their years of experience to guide them Now cutting edge organizations are mining the data and crunching numbers instead to come up with more accurate less biased predictions As Freakonomics detailed statistical analysis can reveal the secret levers of causation But economist Ian Ayres argues that that's only part of the story super crunching is revolutionizing the way we all make decisions Beginning with examples of the mathematician who out predicted wine buffs in determining the best vintages and the sports scouts who now use statistics rather than intuition to pick winners *Super Crunchers* exposes the world of data miners introducing the people and the techniques It illuminates the hidden patterns all around us No businessperson academic student or consumer statistically that's everyone should make another move without getting to grips with thinking by numbers the new way to be smart savvy and statistically superior **The Death of Expertise** Thomas M. Nichols, 2024 In the early 1990s a small group of AIDS denialists including a University of California professor named Peter Duesberg argued against virtually the entire medical establishment's consensus that the human immunodeficiency virus HIV was the cause of Acquired Immune Deficiency Syndrome Science thrives on such counterintuitive challenges but there was no evidence for Duesberg's beliefs which turned out to be baseless Once researchers found HIV doctors and public health officials were able to save countless lives through measures aimed at preventing its transmission **The Death of Expertise** Tom Nichols, 2017-02-01

Technology and increasing levels of education have exposed people to more information than ever before. These societal gains however have also helped fuel a surge in narcissistic and misguided intellectual egalitarianism that has crippled informed debates on any number of issues. Today everyone knows everything with only a quick trip through WebMD or Wikipedia. Average citizens believe themselves to be on an equal intellectual footing with doctors and diplomats. All voices even the most ridiculous demand to be taken with equal seriousness and any claim to the contrary is dismissed as undemocratic elitism. Tom Nichols' *The Death of Expertise* shows how this rejection of experts has occurred: the openness of the internet, the emergence of a customer satisfaction model in higher education and the transformation of the news industry into a 24 hour entertainment machine among other reasons. Paradoxically the increasingly democratic dissemination of information rather than producing an educated public has instead created an army of ill informed and angry citizens who denounce intellectual achievement. When ordinary citizens believe that no one knows more than anyone else democratic institutions themselves are in danger of falling either to populism or to technocracy or in the worst case a combination of both. An update to the 2017 breakout hit the paperback edition of *The Death of Expertise* provides a new foreword to cover the alarming exacerbation of these trends in the aftermath of Donald Trump's election. Judging from events on the ground since it first published *The Death of Expertise* issues a warning about the stability and survival of modern democracy in the Information Age that is even more important today.

**Architecture and Participation** Peter Blundell Jones, Doina Petrescu, Jeremy Till, 2005 Fully illustrated international practitioners and theorists present an exploration of the social and political aspects of our built environment and the influence and involvement of the end user in its formation.

**Reports of Patent, Design, and Trade Mark Cases**, 1926 *The Northeastern Reporter*, 1897 Includes the decisions of the Supreme Courts of Massachusetts, Ohio, Indiana and Illinois and Court of Appeals of New York.
