

The vacuum structure

[EVERYTHING COMES FROM THE VACUUM, EVERYTHING GOES BACK TO THE VACUUM]

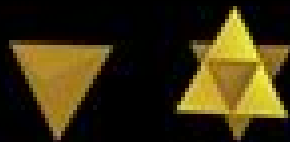

Vacuum is the fundamental information field that connects everything, where everything comes from and where everything goes back to each Planck's. The vacuum constantly changes from a state of contraction to a state of expansion. Its geometry consists of two torus that rotate in opposite directions, creating a feedback loop. As this dynamic, the geometrical structure of the vacuum passes alternately from the cuboctahedron to the star tetrahedron.

The cuboctahedron :
It is the only geometrical solid with perfect vector equilibrium. 14 tetrahedrons + 6 squares (12 equal vectors) point to a central nucleus (the singularity). The cuboctahedron represents the force of contraction (growth).

The star tetrahedron :
14 tetrahedrons pointing out, representing the force of expansion (detachment). The star tetrahedron is non-material.

From the cuboctahedron to the star tetrahedron, the vacuum geometry passes through all the Platonic solids.

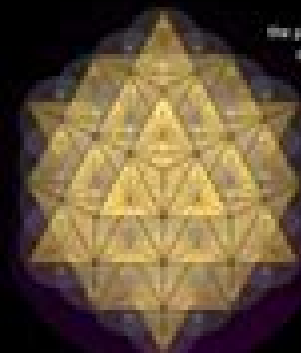

The tetrahedron is the smallest possible geometric volume. The basic structure underlies the oscillations of the vacuum. On a human scale, these represent the ultimate significant level of fractal description of the universe.

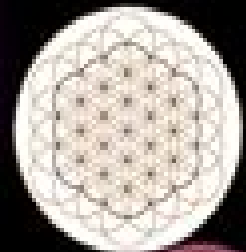

The first three fractal iterations of the vacuum structure : 14 tetrahedrons, then 112, then 1584.

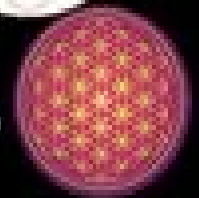

The vacuum structure :
The geometrical combination of the cuboctahedron and the star tetrahedron forms the vacuum structure, consisting of 14 tetrahedrons, of which 144 faces are visible. It is perfectly isotropic, and is the only 3D matrix that can grow into perfect fractal systems. In doing so, it naturally creates a vector equilibrium at regular fractal intervals. It is the fundamental structure of the universe, which generates a force of expansion (detachment) and a force of contraction (growth), allowing the reality of matter to manifest itself.

144 Planck's spheres - which define the position and geometry of the 14 tetrahedrons of the vacuum structure - interpret the holographic interference patterns.

In 2D, the structure obtained is that of a flower of 16 with 57 circles. The most complete representation of the flower of 16 contains 25 circles. The two concentric circles surrounding this pattern imply that it develops infinitely, infinitely.

Structure Of Metaphysics:

The Structure of Metaphysics Morris Lazerowitz, 2014-06-23 This is Volume II of five in a series on Epistemology and Metaphysics Originally published in 1955 this text has main areas that change which has come over philosophy as we have come to realize how very strange philosophical questions are and presents a certain new view of philosophy and its associated new philosophical procedure second it presents typical philosophical disputes and illustrates the new procedure asking what has led philosophers to say the extraordinary things they have said At this stage the study aims to carry this inquiry only far enough to reveal some of the confusions excuses and reasons behind philosophical doctrines Finally the inquiry is carried further and submits that there are often causes for adherence to a philosophical theory deeper than those which appear when we ask the reasons for the theory In illustration of this it ventures in outline a surmise as to one of the deeper sources which lie behind the old and phoenix like paradox Change is unreal **Metaphysics** Claro R. The Structure of Being in Aristotle's Metaphysics Jiyuan Yu, 2003-09-30 This book develops a new interpretation of Aristotle's Metaphysics By exploring the significance of the long ignored distinction between being with regard to categories and being with regard to potentiality and actuality the author presents that Aristotle's science of being has two distinct aspects an investigation of the basic constituents of reality in terms of categories predication and definition and an investigation which deals with change process and order of the world **The Structure of the World** Steven

French, 2014-01-30 In *The Structure of the World* Steven French articulates and defends the bold claim that there are no objects At the most fundamental level modern physics presents us with a world of structures and making sense of that view is the central aim of the increasingly widespread position known as structural realism Drawing on contemporary work in metaphysics and philosophy of science as well as the forgotten history of structural realism itself French attempts to further ground and develop this position He argues that structural realism offers the best way of balancing our need to accommodate the results of modern science with our desire to arrive at an appropriately informed understanding of the world that science presents to us Covering not only the realism antirealism debate the nature of representation and the relationship between metaphysics and science *The Structure of the World* defends a form of eliminativism about objects that sets laws and symmetry principles at the heart of ontology In place of a world of microscopic objects banging into one another and governed by the laws of physics it offers a world of laws and symmetries on which determinate physical properties are dependent In presenting this account French also tackles the distinction between mathematical and physical structures the nature of laws and causality in the context of modern physics and he concludes by exploring the extent to which structural realism can be extended into chemistry and biology *The Structure of Metaphysics, Etc* Morris LAZEROWITZ, 1955 **A**

Metaphysics as a Science in Classical German

Philosophy Robb Dunphy, Toby Lovat, 2023-09-01 This volume is dedicated to questions about the nature and method of metaphysics in Classical German Philosophy Its chapters offer original investigations into the metaphysical projects of many of the major figures in German philosophy between Wolff and Hegel The period of Classical German Philosophy was an extraordinarily rich one in the history of philosophy especially for metaphysics It includes some of the highest achievements of early modern rationalism Kant s critical revolution and the various significant works of German Idealism that followed in Kant s wake The contributions to this volume critically examine certain common themes among metaphysical projects across this period for example the demand that metaphysics amount to a science that it should be presented in the form of a system or that it should proceed by means of demonstration from certain key first principles This volume also includes material on influential criticisms of metaphysical projects of this kind Metaphysics as a Science in Classical German Philosophy is a useful resource for contemporary metaphysicians and historians of philosophy interested in engaging with the history of the methodology and epistemology of metaphysics

Forms and Structure in Plato's Metaphysics Anna Marmodoro, 2021 This book investigates the thought of two of the most influential philosophers of antiquity Plato and his predecessor Anaxagoras with respect to their metaphysical accounts of objects and their properties Marmodoro introduces a fresh perspective on these two thinkers ideas showing Plato s theory to be indebted to Anaxagoras s and principally arguing that their core metaphysical concept is overlap overlap between properties and objects in the world She contends that Plato initially endorses Anaxagoras s model of constitutional overlap but subsequently develops his own model of qualitative overlap Overlap is the crux of our understanding of how for Plato objects participate in Forms of how objects are related without relations of the role of Forms as causes and more Marmodoro s interpretation shows Plato to be ground breaking in his understanding of structure as a property in his explanation of composition and in his account of metaphysical emergence

Book jacket [The Structure of Being in Aristotle's Metaphysics](#) , 2003-09-30 [Metaphysics](#) Hector Davidson, Metaphysics is a branch of philosophy that explores the fundamental nature of reality addressing the most profound questions about existence the nature of objects time space causality and the universe itself As one of the oldest areas of philosophical inquiry metaphysics seeks to answer questions that lie at the core of our understanding of the world and our place within it The term metaphysics derives from the Greek words meta beyond and physika the physical reflecting the idea of examining that which transcends the physical world and investigates the very structure of reality At its core metaphysics asks What is there What is it like How do things exist and what is the nature of their existence These questions are timeless and their answers have evolved over centuries often influencing or being influenced by developments in other branches of philosophy science and theology In examining the nature of reality metaphysicians delve into topics like the nature of objects and their properties the concept of identity and change the structure of time and space and the possibility of alternate realities The scope of metaphysical inquiry is vast One of the primary areas it addresses is ontology which concerns the study

of being and existence Ontological questions include inquiries into the types of entities that exist whether abstract entities like numbers or concepts exist independently of human thought and whether the universe is fundamentally composed of matter or something more fundamental like energy or consciousness **Metaphysical Grounding** Fabrice

Correia,Benjamin Schnieder,2012-10-04 This anthology systematically investigates philosophical ideas about priority and comprises original contributions on particular questions about priority and an introduction which provides a broader survey of the debate addressing its history as well as its central systematic aspects Of interest to students and scholars of metaphysics *Metaphysics: a Study in First Principles* Borden Parker Bowne,1882 *Writing the Book of the World*

Theodore Sider,2011-11-24 Theodore Sider presents a broad new vision of metaphysics centred on the idea of structure To describe the world well we must use concepts that carve at the joints so that conceptual structure matches reality s structure This approach illuminates a wide range of topics such as time modality ontology and the status of metaphysics itself

Metaphysical Institutions Caner K. Dagli,2024-03-01 In *Metaphysical Institutions* Caner K Dagli explores the ultimate nature of the realities we call religions cultures civilizations and traditions through the lens of a particular question often limited to religious studies history and anthropology namely What is Islam The book is both a philosophical treatise about the nature of shared thinking that uses the encounter between the Modern Project and Islam as an illustrative example and an exploration of the conceptualization of Islam in light of the metaphysics of consciousness and meaning Dagli first develops a comprehensive theory of the institution and then expands its meaning to include a new category called metaphysical institutions with the goal of establishing both necessary and empirically variable features of all institutions including those that deal with ultimate questions The new model is then used to analyze questions of authority and autonomy rationality and imitation the universal and the particular and other enduring questions **Plato on Parts and Wholes** Verity Harte,2005
