Structure-Property Relationships of Oxide Surfaces and Interfaces: C. Barry Carter,Xiaoqing Pan,Kurt Sickafus,Harry L. Tuller,Tom E. Wood,2001-09-07 Computer modeling has reached a new level of sophistication where it can be used to predict the structure and energy of interfaces in oxides Nowhere is this activity more important than in these ceramic materials where more applications are being discovered but the fundamental properties are often poorly known or not known at all As more multicomponent oxides are exploited for their novel properties both the experimentalist and the modeler will be challenged to predict or explain the behavior of these materials under a wide range of conditions This book focuses on the interfaces of oxide based materials The areas of composite materials materials synthesis microscopy defect chemistry and structure nanomaterials technologies thin film synthesis and characterization computer modeling structural characterization and properties measurement of surfaces and internal interfaces are featured together with advances in computer modeling of oxide interfaces A series on structural characterization of surfaces and interfaces utilizing advanced microscopic techniques is also provided as is a series on the measurement of properties of real interfaces diffusion mechanical electrical and magnetic

Materials Research Society. Meeting,2003-05-21 Because surfaces and interfaces found in oxide systems are strikingly complex they can only be fully understood when examined at an atomic level Yet for the materials scientist such understanding is of paramount importance since future technological advances require it This book the second in a new series from the Materials Research Society addresses structure property relationships in these systems Compared to the first proceedings here we see a shift towards less well defined materials that often more closely resemble reality and an increasing effort to study these phenomena using in situ techniques Of particular interest are discussions on the dynamical evolution of surface structure and relationships between the structure of surfaces their stoichiometry and the distribution of bulk dislocations which in turn can control the growth and retraction of islands and pits Modeling and characterization of thin intergranular films with a focus on how these films influence the properties of so many ceramic materials are also addressed
