

Structure d'un programme

Début de fonction ou bloc

```
/* Exemple : prog2.c */  
#include <stdio.h>
```

```
int max(int a, int b)  
(  
    if (a>b)  
        return a;  
    else  
        return b;
```

Nom de la fonction

Une fonction qui calcule et renvoie le plus grand des 2 nombres qu'on lui donne

Fin de bloc

```
main()  
(  
    int i,j,k;  
  
    i=10;  
    j=20;

Parallel Computing: Fundamentals, Applications and New Directions E.H. D'Hollander, G.R. Joubert, Frans Peters, Ulrich Trottenberg, 1998-07-22 This volume gives an overview of the state of the art with respect to the development of all types of parallel computers and their application to a wide range of problem areas. The international conference on parallel computing ParCo97 Parallel Computing 97 was held in Bonn Germany from 19 to 22 September 1997. The first conference in this biannual series was held in 1983 in Berlin. Further conferences were held in Leiden The Netherlands London UK Grenoble France and Gent Belgium. From the outset the aim with the ParCo Parallel Computing conferences was to promote the application of parallel computers to solve real life problems. In the case of ParCo97 a new milestone was reached in that more than half of the papers and posters presented were concerned with application aspects. This fact reflects the coming of age of parallel computing. Some 200 papers were submitted to the Program Committee by authors from all over the world. The final programme consisted of four invited papers 71 contributed scientific industrial papers and 45 posters. In addition a panel discussion on Parallel Computing and the Evolution of Cyberspace was held. During and after the conference all final contributions were refereed. Only those papers and posters accepted during this final screening process are included in this volume. The practical emphasis of the conference was accentuated by an industrial exhibition where companies demonstrated the newest developments in parallel processing equipment and software. Speakers from participating companies presented papers in industrial sessions in which new developments in parallel computing were reported.

It explores fresh results and important methods and tools. Among topics addressed are architectures and algorithms parallel computing in non numerical processes parallel computing in optimization control and signal image processing distributed computing and control neural computing communication networks and engineering applications. Research institutes and companies as well as universities and individual computer control systems or communications scientists and engineers should find this a valuable addition to their libraries. *The New Frontiers: a Workshop on Future Directions of Massively Parallel Processing* Isaac D.
