

Strong Force

The strong force holds together things that have the same charge. It's stronger than the electromagnetic force, so that's why atoms with multiple protons and neutrons don't fly apart. But most importantly, it holds together the quarks that make up protons and neutrons themselves. Each proton contains two up quarks and one down. Each neutron contains two down quarks and one up.

Strong Interaction

Adams Sherman Hill

Strong Interaction:

Strong Interaction Thomas Spence Smith, 1995-06-15 This book brings the body and its passions back into a new theory of social interaction and social order Building on innovative conceptions of order change and organization Thomas Spence Smith dramatically expands the definition of human interactions that hold societies together Here he examines the strong interactions such as love relationships attachments and addictive behaviors that are inherently unstable but are integral parts of any social order Blending physiology and psychology with historical examples of social change and a sophisticated new model of social systems this book contributes to our understanding how societies are possible

Gravity, Special Relativity, and the Strong Force Constantinos G. Vayenas, Stamatios N.-A. Souentie, 2012-07-26 This book shows that the strong interaction forces which keep hadrons and nuclei together are relativistic gravitational forces exerted between very small particles in the mass range of neutrinos First this book considers the motion of two or three charged particles under the influence of electrostatic and gravitational forces only which shows that bound states are formed by following the same semi classical methodology used by Bohr to describe the H atom This approach is also coupled with Newton's gravitational law and with Einstein's special relativity The results agree with experiments on the masses binding energies radii angular moments and magnetic moments of hadrons The model provides the means to rationalize all the main experimental features of the strong force Some of the implications for the unification of forces and the nature of our micro cosmos and macro cosmos are also discussed The creation of mass itself in other words of hadrons from particles as light as neutrinos can now be modeled in a straightforward manner

Hypotheses. Solar system and atoms Аркадий Серков, Антон Серков, Мечислав Радисhevский, 2020-07-10 The planetary systems of the micro and macrocosm considered as two nodal points in the structure of matter the author proposes hypotheses in which the laws of one system are transferred to another The quantization of orbits in the solar and satellite systems is proved An explanation is given of the reasons for the deceleration of artificial satellites secular changes in orbital elements and rotational speeds of bodies The analysis of various theories of the origin of the solar system is given The transfer of the laws of the macrocosm to the micro world allows us to interpret the entropy term in the equation of thermodynamic potential as the orbital kinetic energy of molecules gravitating relative to each other A chemical bond is considered as a result of micro gravitation between the masses of nuclei A gravitational equation is proposed for the micro world the calculations of the binding energy on which coincide with the experimental data Additional chapters discuss the energy of the hydrogen cycle the reasons for the multiplicity of masses and the periodicity of the properties of chemical elements as well as the orbital mechanism of aggregate transitions the new concept of Earth's magnetism and the strong interaction in matter Author AT Serkov chapters 22-27 together with AA Serkov and MB Radishevsky
