Structure, Information and Communication Complexity, IIS 1 Paola Flocchini, 1995-05-15 The ultimate goal of research in Distributed Computing is to understand the nature properties and limits of computing in a system of autonomous communicating agents To this end it is crucial to identify those factors which are significant for the computability and the communication complexity of problems A crucial role is played by those factors which can be termed Structural Information its identification characterization analysis and its impact on communication complexity is an important theoretical task which has immediate practical importance The purpose of the Colloquia on Structural Information and Communication Complexity SIROCCO is to focus explicitly on the interaction between structural information and communication complexity The Colloquia comprise position papers presentations of current research and group discussions Series 1 contains papers presented at the 1st Colloquium on Structural Information and Communication Complexity held in Ottawa Canada Series 2 contains papers presented at the 2nd Colloquium held in Olympia Greece *The Syntax of Information-Structural Agreement* Johannes Mursell, 2021-09-15 In this research monograph Johannes Mursell discusses the syntactic impact of information structural features on agreement So far the syntactic contribution of this type of feature has mostly been

reduced to movement of topics or foci clause initial position Here the author looks at a different phenomenon syntactic agreement and how this process can be dependent on information structural properties Based partly on original fieldwork from a typologically diverse set of languages including Tagalog Swahili and Lavukaleve it is argued that for most areas for which information structural features have been discussed it is possible to find cases where these features influence phi feature agreement The analysis is then extended to cases of Association with Focus which does not involve phi features but can still be accounted for with agreement of information structural features The book achieves two main goals first it provides a uniform analysis for different constructions in unrelated languages Second it also gives a new argument that information structural features should be treated as genuine syntactic features

The Matter of Consciousness Torin Andrew Alter, 2023 Torin Alter makes a compelling case against the view that consciousness is a physical phenomenon He argues that Frank Jackson's knowledge argument refutes all standard versions of physicalism and leads to Russellian monism the view there are intrinsic properties which both constitute consciousness and underlie properties described by physics
