Structural Methods In Pattern Recognition:

Syntactic and Structural Pattern Recognition Horst Bunke,Alberto Sanfeliu,1990 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book *Structural Methods in Pattern Recognition* Laurent Miclet,1986

Structural Pattern Analysis R Mohr,Th Pavlidis,Alberto Sanfeliu,1990-01-01 This book contains a selection of 14 papers presented at the workshop organised by the International Association for Pattern Recognition IAPR Technical Committee on Syntactical and Structural Pattern Recognition at Pont Mousson 1988 These papers which have been expanded focus on both fundamental aspects and applications They show that structural methods are a good framework for integrating both symbolic and numerical knowledge for modeling recognition and also learning The applications described are on document analysis speech and image analysis *Advances in Structural and Syntactical Pattern Recognition* Petra Perner,Patrick Wang,1996-08-07 This book constitutes the refereed proceedings of the 6th International Workshop on Structural and Syntactical Pattern Recognition SSPR 96 held in Leipzig Germany in August 1996 The 36 revised full papers included together with three invited papers were carefully selected from a total of 52 submissions The papers are organized in topical sections on grammars and languages morphology and mathematical approaches to pattern recognition semantic nets relational models and graph based methods 2D and 3D shape recognition document image analysis and recognition and handwritten and printed character recognition *Structural, Syntactic, and Statistical Pattern Recognition* Georgy Gimel'farb,Edwin Hancock,Atsushi Imiya,Arjan Kuijper,Mineichi Kudo,Shinichiro Omachi,Terry Windeatt,Keiji Yamada,2012-10-22 This volume constitutes the refereed proceedings of the Joint IAPR International Workshops on Structural and Syntactic Pattern Recognition SSPR 2012 and Statistical Techniques in Pattern Recognition SPR 2012 held in Hiroshima Japan in November 2012 as a satellite event of the 21st International Conference on Pattern Recognition ICPR 2012 The 80 revised full papers presented together with 1 invited paper and the Pierre Devijver award lecture were carefully reviewed and

selected from more than 120 initial submissions The papers are organized in topical sections on structural syntactical and statistical pattern recognition graph and tree methods randomized methods and image analysis kernel methods in structural and syntactical pattern recognition applications of structural and syntactical pattern recognition clustering learning kernel methods in statistical pattern recognition kernel methods in statistical pattern recognition as well as applications of structural syntactical and statistical methods

Ten Lectures on Statistical and Structural Pattern Recognition M.I. Schlesinger, Václav Hlaváč, 2013-03-09 Preface to the English edition This monograph Ten Lectures on Statistical and Structural Pattern Recognition uncovers the close relationship between various well known pattern recognition problems that have so far been considered independent These relationships became apparent when formal procedures addressing not only known problems but also their generalisations were discovered The generalised problem formulations were analysed mathematically and unified algorithms were found The book unifies of two main streams in pattern recognition the statistical and structural ones In addition to this bridging on the uppermost level the book mentions several other unexpected relations within statistical and structural methods The monograph is intended for experts for students as well as for those who want to enter the field of pattern recognition The theory is built up from scratch with almost no assumptions about any prior knowledge of the reader Even when rigorous mathematical language is used we make an effort to keep the text easy to comprehend This approach makes the book suitable for students at the beginning of their scientific career Basic building blocks are explained in a style of an accessible intellectual exercise thus promoting good practice in reading mathematical text The paradoxes beauty and pitfalls of scientific research are shown on examples from pattern recognition Each lecture is amended by a discussion with an inquisitive student that elucidates and deepens the explanation providing additional pointers to computational procedures and deep rooted errors

Implementation of a structural pattern recognition system Bernd Drewes, 1975

Pattern Recognition Robert J. Schalkoff, 1992 Explores the heart of pattern recognition concepts methods and applications using statistical syntactic and neural approaches Divided into four sections it clearly demonstrates the similarities and differences among the three approaches The second part deals with the statistical pattern recognition approach starting with a simple example and finishing with unsupervised learning through clustering Section three discusses the syntactic approach and explores such topics as the capabilities of string grammars and parsing higher dimensional representations and graphical approaches Part four presents an excellent overview of the emerging neural approach including an examination of pattern associations and feedforward nets Along with examples each chapter provides the reader with pertinent literature for a more in depth study of specific topics

Structural, Syntactic, and Statistical Pattern Recognition Ana Fred, Terry Caelli, Robert P.W. Duin, Aurélio Campilho, Dick de Ridder, 2004-10-29 This volume contains all papers presented at SSPR 2004 and SPR 2004 hosted by the Instituto de Telecomunicações Instituto Superior Técnico Lisbon Portugal August 18-20 2004 This was the fourth time that the two workshops were held back to back The SSPR

was the tenth International Workshop on Structural and Syntactic Pattern Recognition and the SPR was the fifth International Workshop on Statistical Techniques in Pattern Recognition. These workshops have traditionally been held in conjunction with ICPR International Conference on Pattern Recognition and are the major events for technical committees TC2 and TC1 respectively of the International Association for Pattern Recognition IAPR. The workshops were closely coordinated being held in parallel with plenary talks and a common session on hybrid systems. This was an attempt to resolve the dilemma of how to deal with the need for narrow focus specialized workshops yet accommodate the presentation of new theories and techniques that blur the distinction between the statistical and the structural approaches. A total of 219 papers were received from many countries with the submission and reviewing processes being carried out separately for each workshop. A total of 59 papers were accepted for oral presentation and 64 for posters. In addition four invited speakers presented informative talks and overviews of their research. They were Alberto Sanfeliu from the Technical University of Catalonia Spain, Marco Gori from the University of Siena Italy, Nello Cristianini from the University of California USA and Erkki Oja from Helsinki University of Technology Finland winner of the 2004 Pierre Devijver Award.

Structural, Syntactic, and Statistical Pattern Recognition Dit-Yan Yeung, 2006-08-03 This is the proceedings of the 11th International Workshop on Structural and Syntactic Pattern Recognition SSPR 2006 and the 6th International Workshop on Statistical Techniques in Pattern Recognition SPR 2006 held in Hong Kong August 2006 alongside the Conference on Pattern Recognition ICPR 2006. 38 revised full papers and 61 revised poster papers are included together with 4 invited papers covering image analysis, character recognition, Bayesian networks, graph based methods and more.

Structural, Syntactic, and Statistical Pattern Recognition Niels da Vitoria Lobo, Takis Kasparis, Michael Georgiopoulos, Fabio Roli, James Kwok, Georgios C. Anagnostopoulos, Marco Loog, 2008-12-02 This volume in the Springer Lecture Notes in Computer Science LNCS series contains 98 papers presented at the SSPR 2008 workshops. SSPR 2008 was the sixth time that the SPR and SSPR workshops organized by Technical Committees TC1 and TC2 of the International Association for Pattern Recognition IAPR were held as joint workshops. SSPR 2008 was held in Orlando Florida the family entertainment capital of the world on the beautiful campus of the University of Central Florida one of the up and coming metropolitan universities in the USA. SSPR 2008 was held during December 4-6 2008 only a few days before the 19th International Conference on Pattern Recognition ICPR 2008 which was held in Tampa only two hours away from Orlando thus giving the opportunity of both conferences to attendees to enjoy the many attractions offered by two neighboring cities in the state of Florida. SPR 2008 and SSPR 2008 received a total of 175 paper submissions from many different countries around the world thus giving the workshop an international clout as was the case for past workshops. This volume contains 98 accepted papers: 56 for oral presentations and 42 for poster presentations. In addition to parallel oral sessions for SPR and SSPR there was also one joint oral session with papers of interest to both the SPR and SSPR communities. A recent trend that has emerged in the pattern recognition and

machine learning research communities is the study of graph based methods that integrate statistical and structural approaches

Advances In Structural And Syntactic Pattern Recognition - Proceedings Of The International Workshop Horst Bunke, 1993-02-23 Pattern recognition is an active area of research with many applications some of which have reached commercial maturity Structural and syntactic methods are very powerful They are based on symbolic data structures together with matching parsing and reasoning procedures that are able to infer interpretations of complex input patterns This book gives an overview of the latest developments and achievements in the field

Pattern Recognition J.P. Marques de Sá, 2012-12-06 Pattern recognition currently comprises a vast body of methods supporting the development of numerous applications in many different areas of activity The generally recognized relevance of pattern recognition methods and techniques lies for the most part in the general trend of intelligent task emulation which has definitely pervaded our daily life Robot assisted manufacture medical diagnostic systems forecast of economic variables exploration of Earth's resources and analysis of satellite data are just a few examples of activity fields where this trend applies The pervasiveness of pattern recognition has boosted the number of task specific methodologies and enriched the number of links with other disciplines As counterbalance to this dispersive tendency there have been more recently new theoretical developments that are bridging together many of the classical pattern recognition methods and presenting a new perspective of their links and inner workings This book has its origin in an introductory course on pattern recognition taught at the Electrical and Computer Engineering Department Oporto University From the initial core of this course the book grew with the intent of presenting a comprehensive and articulated view of pattern recognition methods

combined with the intent of clarifying practical issues with the aid of examples and applications to real life data The book is primarily addressed to undergraduate and graduate students attending pattern recognition courses of engineering and computer science curricula

Artificial Intelligence in Design '98 John S. Gero, Fay Sudweeks, 2012-12-06 The development of computational models of design founded on the artificial intelligence paradigm has provided an impetus for much of current design research As artificial intelligence has matured and developed new approaches so the impact of these new approaches on design research has been felt This can be seen in the way concepts from cognitive science have found their way into artificial intelligence and hence into design research And also in the way in which agent based systems are being incorporated into design systems In design research there is an increasing blurring between notions drawn from artificial intelligence and those drawn from cognitive science Whereas a number of years ago the focus was largely on applying artificial intelligence to designing as an activity thus treating designing as a form of problem solving today we are seeing a much wider variety of conceptions of the role of artificial intelligence in helping to model and comprehend designing as a process Thus we see papers in this volume which have as their focus the development or implementation of frameworks for artificial intelligence in design attempting to determine a unique locus for these ideas We see papers which attempt to find foundations for the development of tools based on the artificial intelligence paradigm often the foundations come from cognitive studies of human designers
