The Spontaneous Brain

Georg Northoff, 2018-10-09 An argument for a Copernican revolution in our consideration of mental features a shift in which the world brain problem supersedes the mind body problem

Philosophers have long debated the mind body problem whether to attribute such mental features as consciousness to mind or to body Meanwhile neuroscientists search for empirical answers seeking neural correlates for consciousness self and free will In this book Georg Northoff does not propose new solutions to the mind body problem instead he questions the problem itself arguing that it is an empirically ontologically and conceptually implausible way to address the existence and reality of mental features We are better off he contends by addressing consciousness and other mental features in terms of the relationship between world and brain philosophers should consider the world brain problem rather than the mind body problem This calls for a Copernican shift in vantage point from within the mind or brain to beyond the brain in our consideration of mental features Northoff a neuroscientist psychiatrist and philosopher explains that empirical evidence suggests that the brain's spontaneous activity and its spatiotemporal structure are central to aligning and integrating the brain within the world This spatiotemporal structure allows the brain to extend beyond itself into body and world creating the world brain relation that is central to mental features Northoff makes his argument in empirical ontological and epistemic methodological terms He discusses current models of the brain and applies these models to recent data on neuronal features underlying consciousness and proposes the world brain relation as the ontological predisposition for consciousness

Arguments and Structure

Teun Hoekstra, 2008-08-22 This book contains 14 articles by Teun Hoekstra 1953 1998 on core issues in syntactic theory Some articles focus on the structure of DP others on the structure of the sentence as a whole while others still deal explicitly with the parallels between the two The papers are distributed over four sections Argument structure T chains The morpho syntax of verbal and nominal projections and Small clauses More than half of the articles in this book are published here for the first time or appear for the first time in English Hoekstra's work is characterized by a fundamental interest in the central

questions of syntactic theory most notably the relation between argument structure and X bar structure This concentrated interest led to a deep understanding of the notion of transitivity with respect to both the status of the external argument and that of the internal argument where status refers to both the content and the licensing In this collection of papers Hoekstra reports on his insights in these matters As far as content and licensing of the external argument is concerned this collection contains papers on the relation between passives and their active counterparts the parallels between possessives and transitives and the differences and similarities between past participles and infinitives As to the internal argument we find papers addressing sentential complementation verbal affixation and resultatives And there is a whole section on tense and its role in keeping the sentence together One of the papers in this collection is Hoekstra s classic but hitherto unpublished Small clauses everywhere more than 70 pages which summarizes Hoekstra s views on such issues as resultatives particle verbs and double object constructions

The Semantic Basis of Argument Structure Stephen Wechsler,1995-06-30 A central problem on the syntax semantics interface is the mapping between semantic roles and syntactic arguments usually termed linking This book presents a clear and concise treatment of linking which departs significantly from models employing a problematical intermediate level where roles are classified into thematic role types such as agent and goal Instead the connection between a verb s meaning and its

argument structure is shown to be quite direct This direct connection appeals to certain fundamental aspects of verb meaning while more specific semantic relations such as goal are relevant to linking only when such relations are associated with the meanings of prepositions and similar forms As a result the theory is firmly grounded in the semantic content of verbs and prepositions *Journal of Slavic Linguistics* ,1996
