Structure-function Relationships Of Proteolytic Enzymes:

Structure-Function Relationships of Proteolytic Enzymes P. Desnuelle, H. Neurath, M. Ottesen, 2014-05-10 *Structure-Function Relationships of Proteolytic Enzymes* provides information pertinent to the fundamental aspects of proteolytic enzymes. This book presents the historical role of proteolytic enzyme as a group in protein and enzyme chemistry. Organized into 23 chapters, this book begins with an overview of the results obtained from investigation on the chymotrypsinogens of porcine origin. This text then examines the differences of amino acid sequence between chymotrypsin, trypsin, and elastase that affect the substrate binding site which reflect the specificity differences between these enzymes. Other chapters consider the kinetic parameters related to the trypsin catalyzed hydrolysis of several model peptides. This book discusses as well the acetylation of trypsin which result in functional consequences varying from complete inactivation to promotion of activity. The final chapter deals with the physical properties of stem bromelain in comparison with the data for three other sulfhydryl proteases of plant origin. This book is a valuable resource for enzymologists, microbiologists, and biochemists.

Structure-function Relationships of Proteolytic Enzymes P. Desnuelle, H. Neurath, M. Ottesen, 1970 *Protein Structure — Function Relationship* D.L. Smith, Z.H. Zaidi, 2012-12-06. Although many pursue understanding of the relationship between protein structure and function for the thrill of pure science, the pay off in a much broader sense is the ability to manipulate the Earth's chemistry and biology to improve the quality of life for mankind. Immediately, goals of this area of research include identification of the life supporting functions of proteins and the fundamental forces that facilitate these functions. Upon reaching these goals, we shall have the understanding to direct and the tools required to implement changes that will dramatically improve the quality of life. For example, understanding the chemical mechanism of diseases will facilitate development of new therapeutic drugs. Likewise, understanding of chemical mechanisms of plant growth will be used with biotechnology to improve food production under adverse climatic conditions. The challenge to understand details of protein structure-function relationships is enormous and requires an international effort for success. To direct the chemistry and biology of our environment in a positive sense will require efforts from bright imaginative scientists located throughout the world. Although the emergence of FAX, e-mail, and the World Wide Web has revolutionized international communication, there remains a need for scientists located in distant parts of the world to occasionally meet face to face. *STRUCTURE-FUNCTION RELATIONSHIPS OF PROTEOLYTIC ENZYMES- PROCEEDINGS OF AN INTERNATIONAL SYMPOSIUM-*
