*Student Learning and Academic Understanding*  
Noel Entwistle, 2018-06-09 The research described in *Student Learning and Academic Understanding* had its origins in the pioneering work of Ausubel Bruner and McKeachie and followed two complementary lines of development The first line extended the ideas of Marton on approaches to learning through an inventory designed to assess these approaches among large samples of students and using in depth interviews with students about their experiences of academic understanding The second line drew on a range of studies to explore the influences of university teaching and the whole teaching learning environment on the quality of student learning Taking the research as a whole shows the value of complementary research approaches to describing student learning while the findings brought together in the final chapter suggest ways of supporting deep approaches and the development of personal academic understanding among students *Student Learning and Academic Understanding* covers a wide range of concepts that have emerged from interviews in which students use their own experiences to describe how they study and what they find most useful in developing an academic understanding of their own These concepts differ from the traditional psychological concepts by being focused on the specific contexts of university and college although they are also relevant to the later stages of school education

**Understanding Student Learning**  
Noel James Entwistle, Paul Ramsden, 1983 The purpose of the research program described here was to investigate college students approaches to learning and to determine the extent to which these reflected the effects of teaching and assessment demands rather than representing relatively stable characteristics of the individual learners There were six main areas within the program 1 the measurement of approaches to and styles of studying 2 the exploration of the cognitive skills cognitive styles and personality characteristics underlying different approaches to studying 3 the extension of Marton s work on reading academic articles 4 the identification of students perceptions of the academic climate of departments 5 the use of interviews to investigate students strategies in carrying out particular types of academic task and 6 an investigation of how

contrasting academic contexts appear to affect the approaches to studying adopted by students in those departments Details of each of these areas of research are presented BW      **Longing for Learning** Deborah Jeanne Travis,2008
