Sustaining Cities:

Planning Sustainable Cities Spiro N. Pollalis, 2016-05-20 *Planning Sustainable Cities* An infrastructure based approach provides an analytical framework for urban sustainability focusing on the services and performance of infrastructure systems. The book approaches infrastructure as a series of systems that function in synergy and are directly linked with urban planning. This method streamlines and guides the planning process while still highlighting detail. Each infrastructure system is decoded in four system levels. The levels organize the processes, highlight connections between entities, and decode the high level planning and decision making process affecting infrastructure. For each system level, strategic objectives of planning are determined. The objectives correspond to the five focus areas of the Zofnass program: Quality of life, Natural World, Climate and Risk, Resource Allocation, Leadership. Developed through the Zofnass Program at the Harvard Graduate School of Design, this approach integrates the key infrastructure systems of Energy, Landscape, Transportation, Waste, Water, Information, and Food, and explores their synergies through land use planning, engineering, economics, and policy. The size and complexity of infrastructure systems means that multiple stakeholders facing their own challenges and agendas are involved in planning; this book creates a common collaborative platform between public authorities, planners, and engineers. It is an essential resource for those seeking Envision Sustainability Professionals accreditation.

Sustainable Cities Richard E. Stren, Rodney White, Rodney R. White, Joseph Whitney, 1992. The idea of sustainability has become central to international dialogues on development. This study focuses on cities and examines the implications that urbanization has for the future of the environment. The contributors explain how the development of infrastructure and industries poses serious threats to the environment through the pollution of air, water, and soil. Many urban governments are actively initiating programs to mitigate harmful environmental impacts, and the discussions show that some forms of urban settlement are more benign than others. To assess whether cities can be sustainable in environmental terms, this book brings together comprehensive studies of the urban experience in nine major countries and regions: the United States, Canada, Western Europe, Eastern Europe, Japan, Southeast Asia, China, and Hong Kong, Africa, and Latin America. The chapters examine the meaning of sustainable development in a specific region, the growth and structure of urban systems, the effects of possible climatic changes on urban areas, the political environment within which cities operate, and the pressures caused by intense urban use of services and natural resources. Chapters conclude with policy proposals for increasing sustainability.

Planning, Development and Management of Sustainable Cities Tan Yigitcanlar, Md. (Liton) Kamruzzaman, 2019-04-30 The concept of sustainable urban development has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene Climate change has emerged to be one of the biggest challenges faced by our planet today threatening both built and natural systems with long term consequences which may be irreversible While there is a vast body of literature on sustainability and sustainable urban development there is currently limited focus on how to cohesively bring together the vital issues of the planning development and management of sustainable cities Moreover it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation but also to the generations beyond The current global school strikes for climate action known as Fridays for Future evidences this The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide This book fills a gap in the literature by bringing together issues related to the planning development and management of cities and focusing on a triple bottom line approach to sustainability

Sharing Cities Duncan McLaren, Julian Agyeman, 2015-12-04 How cities can build on the sharing economy and smart technology to deliver a sharing paradigm that supports justice solidarity and sustainability The future of humanity is urban and the nature of urban space enables and necessitates sharing of resources goods and services experiences Yet traditional forms of sharing have been undermined in modern cities by social fragmentation and commercialization of the public realm In *Sharing Cities* Duncan McLaren and Julian Agyeman argue that the intersection of cities highly networked physical space with new digital technologies and new mediated forms of sharing offers cities the opportunity to connect smart technology to justice solidarity and sustainability McLaren and Agyeman explore the opportunities and risks for sustainability solidarity and justice in the changing nature of sharing McLaren and Agyeman propose a new sharing paradigm which goes beyond the faddish sharing economy seen in such ventures as Uber and

TaskRabbit to envision models of sharing that are not always commercial but also communal encouraging trust and collaboration Detailed case studies of San Francisco Seoul Copenhagen Medell n Amsterdam and Bengaluru formerly Bangalore contextualize the authors discussions of collaborative consumption and production the shared public realm both physical and virtual the design of sharing to enhance equity and justice and the prospects for scaling up the sharing paradigm though city governance They show how sharing could shift values and norms enable civic engagement and political activism and rebuild a shared urban commons Their case for sharing and solidarity offers a powerful alternative for urban futures to conventional race to the bottom narratives of competition enclosure and division

After Sustainable Cities? Mike Hodson, Simon Marvin, 2014-04-24 A sustainable city has been defined in many ways Yet the most common understanding is a vision of the city that is able to meet the needs of the present without compromising the ability of future generations to meet their own needs Central to this vision are two ideas cities should meet social needs especially of the poor and not exceed the ability of the global environment to meet needs *After Sustainable Cities* critically reviews what has happened to these priorities and asks whether these social commitments have been abandoned in a period of austerity governance and climate change and replaced by a darker and unfair city This book provides the first comprehensive and comparative analysis of the new eco logics reshaping conventional sustainable cities discourse and environmental priorities of cities in both the global north and south The dominant discourse on sustainable cities with a commitment to intergenerational equity social justice and global responsibility has come under increasing pressure Under conditions of global ecological change international financial and economic crisis and austerity governance new eco logics are entering the urban sustainability lexicon climate change green growth smart growth resilience and vulnerability ecological security This book explores how these new eco logics reshape our understanding of equity justice and global responsibility and how these more technologically and economically driven themes resonate and dissonate with conventional sustainable cities discourse This book provides a warning that a more technologically driven and narrowly constructed economic agenda is driving ecological policy and weakening previous commitment to social justice and equity *After Sustainable Cities* brings together leading researchers to provide a critical examination of these new logics and identity what sort of city is now emerging as well as consider the longer term implication on sustainable cities research and policy

Rethinking Sustainable Cities David Simon, 2016-08-31 Available Open Access under CC BY NC licence Sustainable urbanisation has moved to the forefront of global debate research and policy agendas over recent years Rapid urbanisation throughout China India and many other low and middle income countries poses new challenges both locally and internationally at a time when urban areas worldwide are threatened by climate environmental change This compact book is designed to make a signal contribution to the sustainable urbanisation agenda through authoritative interventions contextualising assessing and explaining clearly the relevance and importance of three central characteristics of sustainable towns and cities everywhere namely that they should be accessible green and fair

These three terms form key tenets of the work of Mistra Urban Futures MUF an international research centre on sustainable urbanisation based in Gothenburg Sweden and working through transdisciplinary research platforms there in Greater Manchester UK Cape Town South Africa and Kisumu Kenya Additional platforms are being established in southern Sweden Asia and Africa
